MITSUBISHI ELECTRIC CORPORATION

Doing Our Part to Create a Better Future for All...

Core Environmental Policy

The Mitsubishi Electric Group promotes sustainable development and is committed to protecting and restoring the global environment through technology, through all its business activities, and through the actions of its employees.

Environmental Vision 2021

Making Positive Contributions to the Earth and its People through Technology and Action

Preventing Global Warming

- Reduce CO_2 emissions from product usage by 30%
- Reduce total CO_2 emissions from production by 30%
- Aim to reduce CO_2 emissions from power generation

Creating a Recycling-Based Society

- Reduce, reuse and recycle "3Rs" products reduce resources used by 30%
- Zero emissions from manufacturing reducing the direct landfill of waste to zero

Ensuring Harmony with Nature
Fostering Environmental Awareness

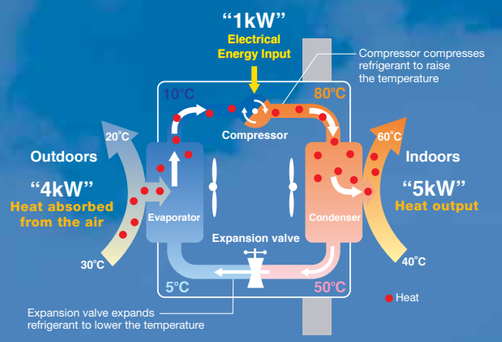
Mitsubishi Electric reflects the essence of this policy and vision in all aspects of its air conditioner business as well.

Preventing Global Warming

Heat pump technology inspires Mitsubishi Electric to design air conditioners that harmonize comfort and ecology.

Heat Pump Principle (When Heating) <Case of COP 5.0>

Refrigerant and Heat Circulation



Output energy is quintuple of input energy

"1kW" Electrical Energy Input
+
"4kW" Heat Absorbed from the air
=
"5kW" Heat Output

Mitsubishi Electric develops technologies to balance comfort and ecology, achieving greater efficiency in heat pump operation.

	Comfort	Ecology
1. Inverter	Faster start-up and more stable indoor temperature than non-inverter units.	Fewer On/Off operations than with non-inverter, saving energy.
2. i-see Sensor	Monitoring the temperature gaps between the floor and the set temperature to prevent deficient warming.	Optimum control of the airflow to prevent excessive compressor operation for more efficient heating operation.
3. Flash Injection	Achieves high heating capacity even at low temperatures, plus faster start-up compared to conventional inverters.	Expands the region covered by heat pump heating system.

Creating a Recycling-Based Society

1. **All models are designed for RoHS and WEEE compliance.***
2. **Mitsubishi Electric develops downsizing technology to reduce materials use.**
   - **PUHZ-RP200/250YHA2: Volume reduction approx. 60% compared to PUHZ-RP200/250YHA**
   - **MUZ-GC25VA & MUZ-HC25/25VA: Volume reduction approx. 25% compared to MUZ-GA25 & MUZ-HA25/35VA**

* WEEE and RoHS directives: The Waste Electrical and Electronic Equipment (WEEE) Directive is a recycling directive for this type of equipment, while the Restrictions of Hazardous Substances (RoHS) Directive is an EU directive restricting the use of six specified substances in electronic and electrical devices. In the EU, it is no longer possible (from July 2006) to sell products containing any of the six substances.

Ensuring Harmony with Nature/ Fostering Environmental Awareness

In striving to heighten the eco-awareness of its employees, Mitsubishi Electric provides education in RoHS, WEEE and other environmental regulations, along with environmental education targeting second and third-year workers.

DC Inverter INVERTER TECHNOLOGIES

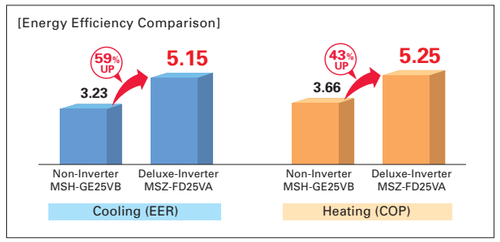
Mitsubishi Electric inverters ensure superior performance including the optimum control of operation frequency. As a result, optimum power is applied in all heating/cooling ranges and maximum comfort is achieved while consuming minimal energy. Fast, comfortable operation and amazingly low running cost — That's the Mitsubishi Electric promise.

INVERTERS — HOW THEY WORK

Inverters electronically control the electrical voltage, current and frequency of electrical devices such as the compressor motor in an air conditioner. They receive information from sensors monitoring operating conditions, and adjust the revolution speed of the compressor, which directly regulates air conditioner output. Optimum control of operation frequency results in eliminating the consumption of excessive electricity and providing the most comfortable room environment.

ECONOMIC OPERATION

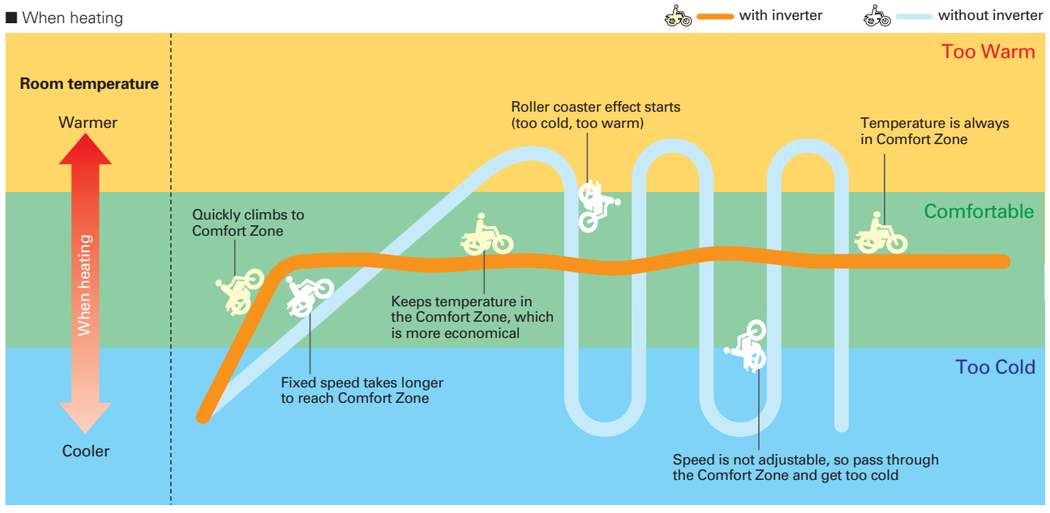
Impressively low operating cost is a key advantage of inverter air conditioners. We've combined advanced inverter technologies with cutting-edge electronics and mechanical technologies to achieve a synergistic effect that enables improvements in heating/cooling performance efficiency. Better performance and lower energy consumption are the result.



TRUE COMFORT

Simple comparison of air conditioner operation control with and without inverter.

■ When heating



Quick & Powerful

Increasing the compressor motor speed by controlling the operation frequency ensures powerful output at start-up, brings the room temperature to the Comfort Zone faster than units not equipped with an inverter. Hot rooms are cooled, and cold rooms are heated faster and more efficiently.

Room Temperature Maintained

The compressor motor operating frequency and the change of room temperature are monitored to calculate the most efficient waveform to maintain the room temperature in the Comfort Zone. This eliminates the large temperature swings common with non-inverter systems, and guarantees a pleasant, comfortable environment.

MORE ADVANTAGES WITH MITSUBISHI ELECTRIC

Joint Lap DC Motor

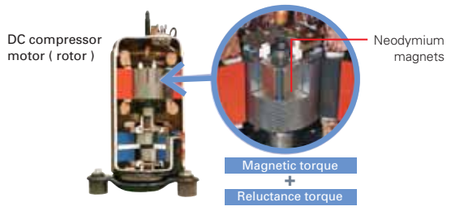
Mitsubishi Electric has developed a unique motor, called the "Poki-Poki Motor" in Japan, which is manufactured using a joint lapping technique. This innovative motor operates based on a high-density, high-magnetic force, leading to extremely high efficiency and reliability.

Magnetic Flux Vector Sine Wave Drive

This drive device is actually a microprocessor that converts the compressor motor's electrical current waveform from a conventional waveform to a sine wave (180°conductance) to achieve higher efficiency by raising the motor winding utilisation ratio and reducing energy loss.

Reluctance DC Rotary Compressor

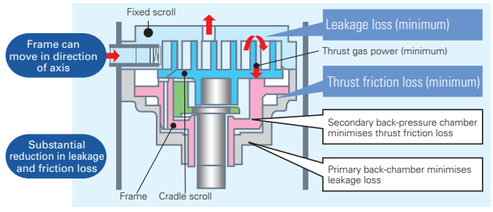
Powerful neodymium magnets are used in the rotor of the reluctance DC motor. More efficient operation is realised by strong magnetic and reluctance torques produced by the magnets.



Highly Efficient DC Scroll Compressor

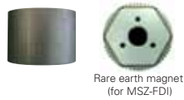
Higher efficiency has been achieved by adding a frame compliance mechanism to the DC scroll compressor. The mechanism allows movement in the axial direction of the frame supporting the cradle scroll, thereby greatly reducing leakage and friction loss, and ensuring extremely high efficiency at all speeds.

*Japan Society of Refrigerating and Air Conditioning Engineers



Rare Earth Magnet Rotor (Compressor)

An innovative motor with a rare earth magnet rotor is equipped in the compressor to ensure excellent efficiency. The rare earth magnet has a residual magnetic flux density threefold that of the previously used ferrite magnet.



Rare earth magnet (for MSZ-FDI)

DC Fan Motor

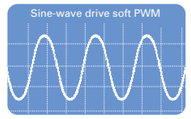
A highly efficient DC motor drives the fan of the outdoor unit. Efficiency is much higher than an equivalent AC motor.

Vector-Wave Eco Inverter

This inverter monitors the varying compressor motor frequency and creates the most efficient waveform for the motor speed. As the result, operating efficiency in all speed ranges is improved, less power is used and annual electricity cost is reduced.

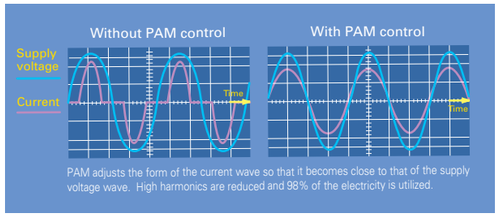
Smooth wave pattern

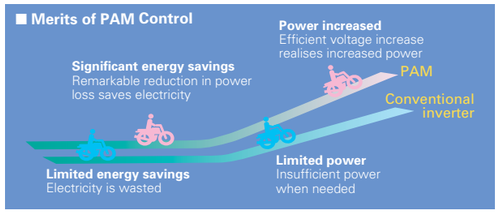
Inverter size has been reduced using insert-molding, where the circuit pattern is molded into the synthetic resin. To ensure quiet operation, soft PWM control is used to prevent the metallic whine associated with conventional inverters.



PAM (Pulse Amplitude Modulation)

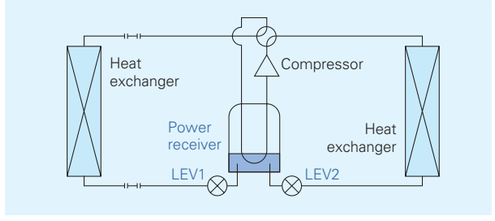
PAM is a technology that controls the current waveform so that it resembles the supply voltage wave, thereby reducing loss and realising more efficient use of electricity. Using PAM control, 98% of the input power supply is used effectively.





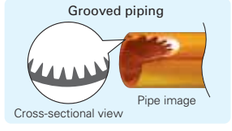
Power Receiver and Twin LEV Control

Mitsubishi Electric has developed a power receiver and twin linear expansion valves (LEVs) circuit that optimise compressor performance. This technology ensures optimum control in response to operating waveform and outdoor temperature. Operating efficiency has been enhanced by tailoring the system to the characteristics of R410A refrigerant.



Grooved Piping

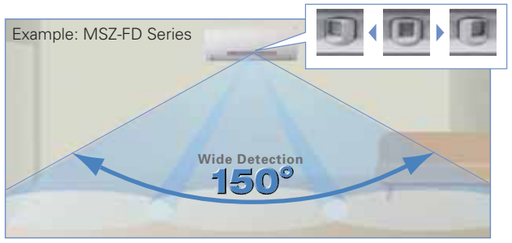
High-performance grooved piping is used in heat exchangers to increase the heat exchange area.



FUNCTIONS

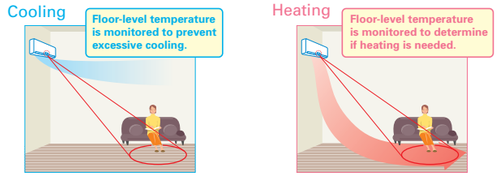
ENERGY-SAVING

i-see Sensor Felt Temperature Control



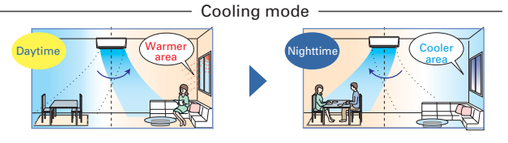
The "i-see Sensor" sweeps from side-to-side automatically monitoring the floor temperature over a wide area spanning 150°.

Conventional air conditioners monitor the air temperature at the top of a room to control room temperature and fail to take foot-level temperature, that which has the strongest impact on room comfort, into consideration. The "i-see Sensor" monitors the floor temperature and estimates the "felt temperature" (i.e., the temperature felt by people in the room). The airflow speed and temperature are adjusted to prevent over-heating/cooling, thereby eliminating the consumption of excessive electricity.



AREA Area Temperature Monitor

The "i-see Sensor" monitors the whole room in sections and directs the airflow to areas of the room where the temperature does not match the temperature setting. (When cooling the room, if the middle of the room is detected to be hotter, more airflow is directed towards it.) This eliminates unnecessary heating /cooling and contributes to lower electricity costs.



Econo Cool Energy-Saving Feature

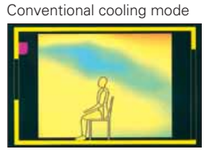
"Econo Cool" is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 2°C without any loss in comfort, thereby realising a 20% gain in energy efficiency. *(Function only available during manual cooling operation.)*

	Conventional	Econo Cool
Ambient temperature	35°C	35°C
Set temperature	25°C	27°C
Perceived temperature	30°C	**29.3°C**

Econo Cool Mode
A comfortable room environment is maintained even when setting the temperature 2°C higher than the conventional cooling mode.

Econo Cool on

Conventional cooling mode



Temperature distribution (°C)

"I Feel" Control

The "I Feel" fuzzy-logic control memorises the most desirable temperature setting. If the "TOO WARM" or "TOO COOL" button on the remote controller is pressed, the system adds the choice to the control memory and adjusts the temperature so that the most comfortable temperature is provided. That temperature setting is used the next time the unit is turned on.

Demand Function (Onsite Adjustment)

The demand function can be activated when the unit is equipped with a commercially available timer or an On/Off switch is added to the CNDM connector (option) on the control board of the outdoor unit. Energy consumption can be reduced up to 100% of the normal consumption according to the signal input from outside.

[Example: Power Inverter Series]
Limit energy consumption by changing the settings of SW7-1 and SW7-2 on the control board of the outdoor unit. The following settings are possible.

SW7-1	SW7-2	Energy consumption
OFF	OFF	0% (STOP)
ON	OFF	50%
OFF	ON	75%

ATTRACTIVE

Pure White

Pure white is adopted for the unit colour; white expressing the essence of cleanliness and easily matching virtually all interior décor.

AUTO VANE Auto Vane

The vane closes automatically when the air conditioner is not running, concealing the air outlet and creating a flat surface that is aesthetically appealing.

AIR QUALITY

Plasma Duo

Units are equipped with a pre-filter and two special filters that perform plasma air cleaning and plasma purification functions (Plasma Duo). The plasma system remove bad odours and bacterial particulates of micron- and nanometre-size from the air.

Air Cleaning Filter

The filter is charged with static electricity, enabling it to attract and capture dust particulates that regular filters don't.

Fresh-air Intake

Indoor air quality is enhanced by the direct intake of fresh exterior air.

Anti-allergy Enzyme Filter

The anti-allergy enzyme filter works to trap allergens such as molds and bacteria and decompose them using enzymes retained in the filter.

High-efficiency Filter

This high-performance filter has a much finer mesh compared to standard filters, and is capable of capturing minute particulates floating in the air that were not previously caught.

Catechin Filter

Catechin is a bioflavonoid by-product of green tea with both antiviral and antioxidant qualities. It also has an excellent deodorising effect, which is why Mitsubishi Electric uses the compound in its air conditioner filters. In addition to improving air quality, it prevents the spreading of bacteria and viruses throughout the room. Easily removed for cleaning and maintenance, when the filter is washed regularly the deodorising action is rated to last more than 10 years.

Oil Mist Filter

The oil mist filter prevents oil mist from penetrating into the inner part of the air conditioner.

Long-life Filter

A special process for the entrapment surface improves the filtering effect, making the maintenance cycle longer than that of units equipped with conventional filters.

Filter Check Signal

Air conditioner operating time is monitored, and the user is notified when filter maintenance is necessary.

AIR DISTRIBUTION

Horizontal Fin

The air outlet vane swings up and down so that the airflow is spread evenly throughout the room.

Vertical Fin

The air outlet fin swings from side to side so that the airflow reaches every part of the room.

High Ceiling Mode

In the case of rooms with high ceilings, the outlet-air volume can be increased to ensure that air is circulated all the way to the floor.

Low Ceiling Mode

If the room has a low ceiling, the airflow volume can be reduced for less draft.

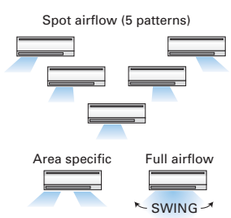
Auto Fan Speed Mode

The airflow speed mode adjusts the fan speed of the indoor unit automatically according to the present room conditions.

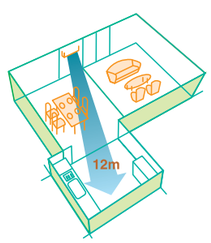
Wide and Long Airflow

The wide and long airflow function is especially beneficial for large spaces, helping to ensure that air is well circulated and reaches every corner of the room.

Wide Airflow
This unique airflow system distributes air horizontally over a wide-ranging 150°in heating mode and 100°in cooling mode. Simply press the Wide Swing icon on the remote controller to select the desired airflow from seven different patterns.



Long Airflow
Use this function to ensure that the airflow circulates to areas far across the room. Press the Long Airflow icon on the remote controller to extend reach up to as far as 12 metres from the unit.



FUNCTIONS

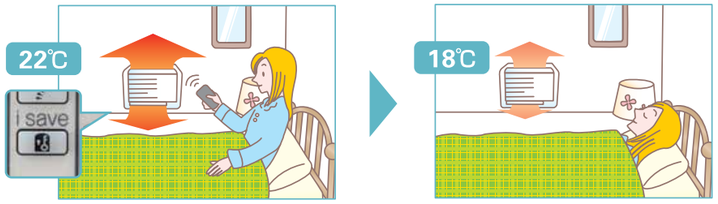
CONVENIENCE

On/Off Operation Timer

Use the remote controller to set the times of turning the air conditioner On/Off.

"i save" Mode

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting.
Using this function contributes to comfortable waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.



Pictured: MFZ Series remote controller

Auto Changeover

The air conditioner automatically switches between heating and cooling modes to maintain the desired temperature.

Low-temperature Cooling

Intelligent fan speed control in the outdoor unit ensures optimum performance even when the outside temperature is low.

Ampere Limit Adjustment

Dipswitch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs.

*Maximum capacity is lowered with the use of this function.

Operation Lock

To accommodate specific use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service.

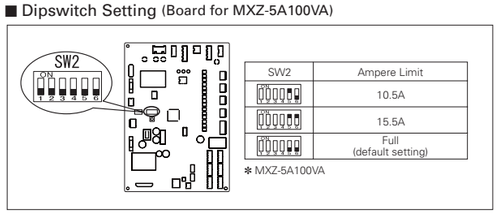
Auto Restart

Especially useful at the time of power outages, the unit turns back on automatically when power is restored.

Low-noise Operation (Outdoor Unit)

System operation can be adjusted to prioritise less noise from the outdoor unit over air conditioning performance.

■ Dipswitch Setting (Board for MXZ-5A100VA)



SW2	Ampere Limit
	10.5A
	15.5A

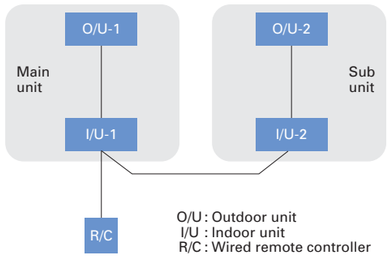
Rotation, Back-up and 2nd Stage Cut-in Functions

(1) Rotation and Back-up Functions
Function Outline
- Main and sub units take turns operating according to a rotation interval setting.
- If one unit malfunctions, the other unit automatically begins operation (Back-up function)

System Image

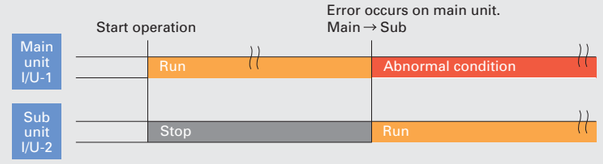


(2) 2nd Stage Cut-in Function
Function Outline
- Number of units operating is based on room temperature and predetermined settings.
- When room temperature rises above the desired setting, the standby unit starts (2-unit operation).
- When the room temperature falls 4°C below the predetermined setting, the standby unit stops (1-unit operation).

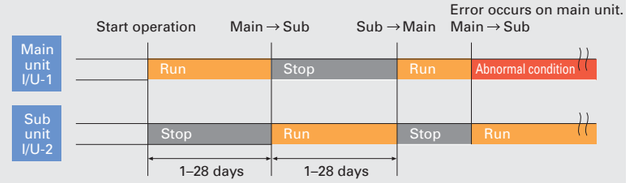
System Constraint
- This function is only available for rotation operation and when the back-up function is in cooling mode.

Operation Pattern

[Back-up function only]



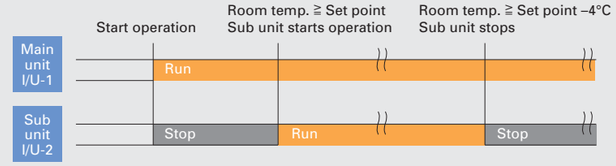
[Rotation function] & [Back-up function]



(Ex: When the request code is "313", each unit operates alternately in daily cycle.)

Operation Pattern

[2nd stage cut-in function]



SYSTEM CONTROL

PAR-21MAA Control

Units are compatible for use with the PAR-21MAA remote controller, which has a variety of management functions including a weekly timer.

System Group Control

The same remote controller is capable of controlling the operational status of up to 16 refrigerant systems.

M-NET Connection

Units can be connected to MELANS system controllers (M-NET controllers) such as the AG-150A.

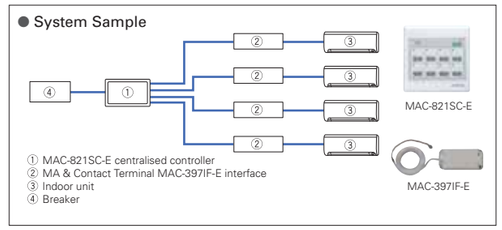
COMPO (Simultaneous Multi-unit Operation)

Multiple indoor units can be connected to a single outdoor unit. (Depending on the unit combination, connection of up to four units is possible; however, all indoor units must operate at the same settings.)

Centralised On/Off Control

Units can be connected to the MAC-821SC-E centralised remote controller, which can control the On/Off function for a maximum of eight indoor units.

● System Sample



MXZ Connection

Connection to the MXZ multi-split outdoor unit is possible.

FUNCTIONS

INSTALLATION

Cleaning-free Pipe Reuse

The application of pipe reuse technology such as Mitsubishi Electric's original hard alkyl benzene oil makes it possible to reuse the same piping, thereby allowing cleaning-free renewal of air conditioning systems that use R22 refrigerant.

- Before exchanging the air conditioning units, cleaning may be necessary if the inner sides of the piping are extremely dirty due to the accumulation of iron particulates generated as the result of friction between moving components in the compressor.
- R410 refrigerant operates at a higher pressure than R22. It is therefore necessary to ensure that the pipe diameter and thickness meet specific standards.

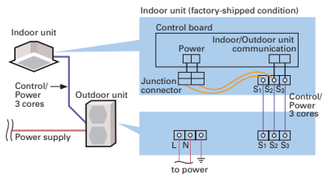
Reuse of Existing Wiring

Wiring recycling problem solved! Compatible with other wiring connection methods*

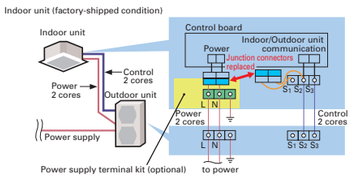
The wiring method has been improved, making it possible to use methods different from that utilized for control and power supply. Units are compatible with the dual harness control line/power line method and the separate power supply method. Using a power-supply terminal kit, wire can be efficiently reused at the time of system renewal regardless of the method the existing system uses.

*Optional. Usage may be limited due to wiring type diameter.

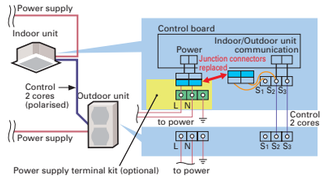
Single Harness Control/Power Line Method (Current method)



Dual Harness Control Line/Power Line Method



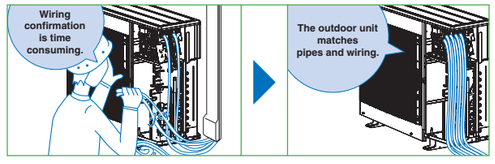
Separate Power Supply Method



Wiring/Piping Correction Function*

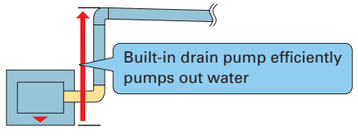
The push of a single button is all that is required to confirm that piping and wiring are properly connected. Corrections are made automatically if a wiring error is detected, eliminating the need for complicated wiring confirmation work when expanding the number of rooms served.

*This function cannot be used when the outdoor temperature is below 0°C. The correction process requires 10–15 minutes, and only works when the unit is set to the Cooling mode.



Drain Pump

A built-in drain pump enables drain piping to be raised.



Flare Connection

Flare connection to cooling pipe work is possible.

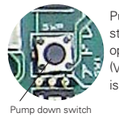
Pump Down Switch

Enables smooth and easy recovery of refrigerant. Simply press the "Pump Down" switch before moving or changing the unit.

Outdoor unit control circuit board

*Photo of Model PUHZ-P100

Pump Down Switch



Push this switch to start/stop refrigerant recovery operation automatically. (Valve in refrigerant circuit is opened/closed.)

MAINTENANCE

Quick Clean Body

The cover panel can be quickly removed for washing and the airflow vents can be opened without any special tools, making it easy to clean the inside of the air conditioner in minutes. Periodic cleaning of the air conditioner is recommended to maintain optimum operating efficiency and energy savings.

Open the vents and reach into clean the fan

Exclusive Quick Clean Kit (Optional)

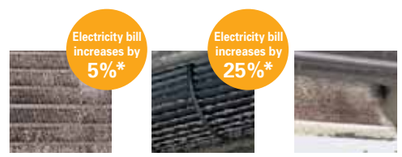
Our exclusive "Quick Clean Kit" can be easily connected to a household vacuum cleaner for quick and easy cleaning of the heat exchanger.*

*It is highly recommended that rubber gloves be worn when cleaning the heat exchanger. Touching it with bare hands may lead to injury.

Mitsubishi Electric's "Quick Clean Body" prevents increases in electricity cost by as much as 30%*

Always clean the heat exchanger, fan, and air vent to ensure proper performance and economical operation.

*Electricity cost comparison of operation between two units at a fixed temperature; one with 8g of dirt on one fan and the other fan clean. Based on in-house data.



Self-diagnostic Function (Check Code Display)

Check codes are displayed on the remote controller or the operation indicator to inform the user of malfunctions detected.

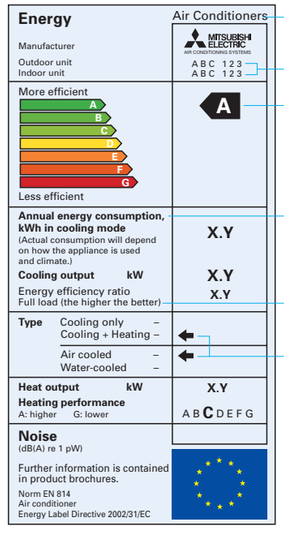
Failure Recall Function

Operation failures are recorded, allowing confirmation when needed.

ENERGY LABELING

In order to conform with the regulations stipulated in the Kyoto Protocol, the European Climate Change Program has been introduced. This program has established a form of "energy labeling" as one method to promote the reduction of CO_2 emissions. The European Commission is confident that this labeling program will contribute to educating companies and the public as to the vital importance of understanding energy consumption, thereby leading consumers to purchase products that are both efficient and environmentally friendly. Each label contains information pertaining to the amount of energy consumed by the unit. Air conditioners with cooling capacities of under 12kW are split into seven categories (A-G). Each category is classified according to energy consumption (i.e. the "Energy Efficiency Ratio") and color coded. Units in Category A are the most efficient, symbolized by a green arrow on the label. Less efficient units are classified in order of efficiency, with the least efficient units belonging to Category G, the label of which is marked with a red arrow. This enables consumers to easily identify the more efficient units when they are comparing brands and units at the time of purchase.

Energy Labeling of Air Conditioners



Product

Model Name

Energy Efficiency Class

Annual Energy Consumption
The Annual Energy Consumption is calculated with the total input power multiplied by an average of 500 hours per year in cooling mode at full load.

Energy Efficiency Ratio
Higher EER means better energy efficiency.

Type of Air Conditioner

Classifications

All air conditioners with the cooling capacity under 12kW are concerned.
Directive defines for each type of product the energy class going from A (more efficient) to G (less efficient).
The energy efficiency class is determined in accordance with the following tables.

Energy Efficiency Class In cooling mode	Energy Efficiency Class In heating mode
A 3.20 < EER	A 3.60 < COP
B 3.20 ≥ EER > 3.00	B 3.60 ≥ COP > 3.40
C 3.00 ≥ EER > 2.80	C 3.40 ≥ COP > 3.20
D 2.80 ≥ EER > 2.60	D 3.20 ≥ COP > 2.80
E 2.60 ≥ EER > 2.40	E 2.80 ≥ COP > 2.60
F 2.40 ≥ EER > 2.20	F 2.60 ≥ COP > 2.40
G 2.20 ≥ EER	G 2.40 ≥ COP

(These classifications are for Split and Multi-Split type air conditioners.)

FEATURES

• The figures listed in the table are "only when combined with an outdoor unit with the appropriate capacity range".
• Optional: Separate parts must be purchased.

| Category | | Icon | Combination | Indoor unit | M SERIES | | | | | | | | | | | | | | | | | | | | | | | | | | S SERIES | | | | | | | | | | | | | | | | | | |

FEATURES

• If a numerical figure is listed, the feature is only available with the outdoor unit of that capacity.
• Optional: Optional parts must be purchased.

CONTROL TECHNOLOGIES

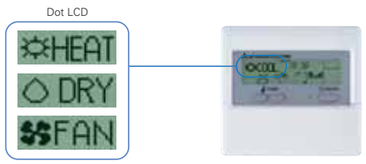
Newly Developed Advanced MA Remote Controller — A Progressive Step in the Evolution of Air Conditioning Control

PAR-21MAA

Dot Liquid-crystal Display Adopted

The adoption of dot liquid-crystal display (LCD) technology and a large display screen for the control panel optimises visibility. Operation and control status are easily read at a glance.

Display Example [Operation Mode]



Easy To Read & Easy To Use

First Multi-language Display in the Industry

Multi-language

Control panel operation in eight different languages.

Choose the desired language, among the following languages.

1st in the Industry!

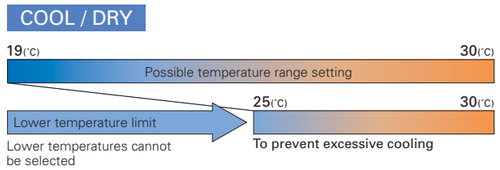
Energy-efficient Control

Operation Control Function

Limited Temperature Range Settings

Air conditioner operation restricted to within a specified operating range

Set the upper and lower limits for the temperature range during operation. Excessive heating or cooling is prevented, leading to increased energy savings.



Recommended for: Office, Restaurant

Auto-off Timer

Automatically turns off air conditioner

Set the time for the air conditioner to turn off automatically. The timer can be set in the range from 30 minutes up to 4 hours in 30-minute intervals.

The "Simple Timer"—starts/stops in units of 1 hour in a 72-hour period—is set at the time of shipment from the factory. It can be changed to the "Auto-off Timer" function using the remote controller.

Recommended for: Meeting room

Operation Lock

Prevent operation settings from being changed

Units can be set so that the operation mode cannot be changed. When "Operation Lock" is activated, new temperature setting commands are not accepted, thereby ensuring that the unit runs in the specified (locked in) temperature range. This promotes energy savings and prevents erroneous/ mischievous operation.

Only the administrator can change settings when using the Operation Lock mode.

Recommend to use in: Office, School / Private school, Public facility like public hall, Hospital, Server room

Weekly Timer – Introduced in Response to Market Demand

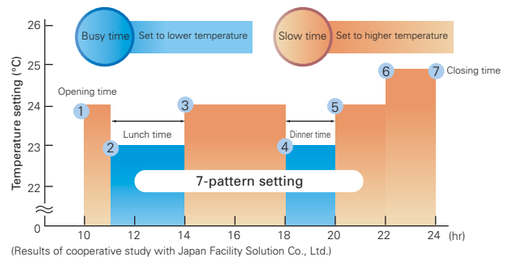
Control temperature on a weekly basis

Temperature settings and On/Off control can be managed over a period of one week using the Weekly Timer. Up to eight setting patterns per calendar day are possible.

Economical & Space Saving

PAR-20MAA Conventional MA Remote Controller + PAC-YT34STA Schedule Timer ▶ PAR-21MAA Remote Controller

Setting Example (restaurant in summer time)



(Results of cooperative study with Japan Facility Solution Co., Ltd.)

Setting the temperature 1°C higher for cooling and 1°C lower for heating leads to an energy savings of approximately 10%.

Approximate 10%* Energy Savings

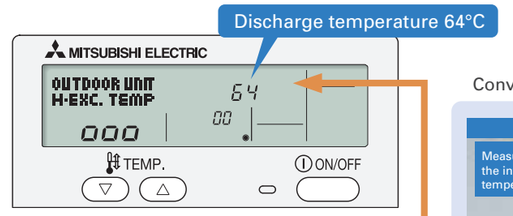
*Based on in-house calculations

Easy Maintenance Function (Mr. Slim Power Inverter only)

POWER INVERTER

- Nearly maintenance-free operation
- Monitor operation data of the indoor and outdoor units via the remote controller.

Remote controller also lets you set the operating frequency, allowing easier inspection.

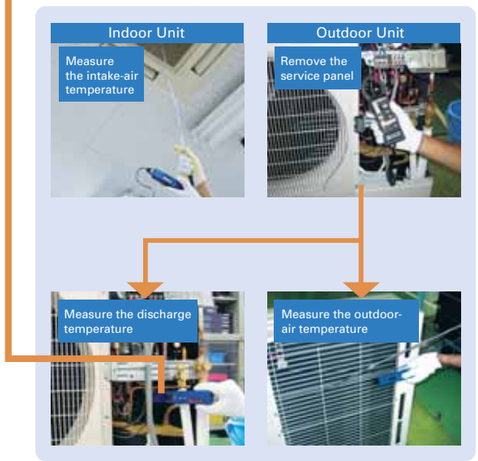


Easy Maintenance Information

Compressor		Outdoor Unit		Indoor Unit	
①	Accumulated operating time (x10hr)	④	Heat exchanger temperature (°C)	⑦	Intake-air temperature (°C)
②	Number of ON/OFF times (x100 times)	⑤	Discharge temperature (°C)	⑧	Heat exchanger temperature (°C)
③	Operating current (A)	⑥	Outdoor-air temperature (°C)	⑨	Filter operating time* (hr)

*The filter operating time is the time elapsed since the filter button was reset.

Conventional Inspection Work



Refrigerant Leakage Check (Mr. Slim Power Inverter only)

POWER INVERTER

The Mr. Slim Power Inverter units come equipped with a useful new "Refrigerant Leakage Check" function. Using a wired remote controller, it is easy to check if refrigerant has been lost over a long period of use. This reduces service time and gives an added sense of safety.

SYSTEM CONTROL

Versatile system controls can be realised using optional parts, relay circuits, control panels, etc.

MAJOR SYSTEM CONTROL

	System Examples		
Indoor Unit	M Series Indoor Unit	S Series & P Series Indoor Unit	P Series Indoor Unit
Outdoor Unit	M Series and MXZ Series Outdoor	S Series and MXZ Series Outdoor	P Series Outdoor
PAR-21MAA Control			
Details	• Wired remote controller can be connected to indoor unit	Standard equipment (for indoor units compatible with wired remote controllers)	
Major Optional Parts Required	• MAC-397IF-E (Interface) • PAR-21MAA (Wired remote controller)	• PAR-21MAA (Wired remote controller)	
System Group Control			
Details	• One remote controller can control plural air conditioners with the same settings simultaneously. • One remote controller can control up to 16 refrigerant systems. (When connected to a MXZ unit, MAC-397IF-E is counted as one system.) • Up to two remote controller can be connected.		
Major Optional Parts Required	• MAC-397IF-E (Interface) • PAR-21MAA (Wired remote controller)		
Centralised On/Off Control			
Details	• Up to 8 indoor units can be switched On/Off with one remote controller.		
Major Optional Parts Required	• MAC-397IF-E (Interface) • MAC-821SC-E (Centralised remote controller)		
M-NET Connections			Details	• Group of air conditioners can be controlled by MELANS system controller (M-NET).		
Major Optional Parts Required	• MAC-399IF-E (M-NET Interface) • MELANS System controller • PAC-SC50KA (power supply unit)		• PAC-SF81MA-E (M-NET converter) • MELANS System controller • PAC-SC50KA (power supply unit)

OTHERS

For M Series Indoor Units (New A-control Models Only)

	System Examples	Connection Details	Control Details	Major Optional Parts Required
1 Remote On/Off Operation • Air conditioner can be started/stopped remotely. (1 and 2 can be used in combination)		Connect the interface to the air conditioner. Then connect the locally purchased remote controller to the terminal in the interface.	On/Off operation is possible from a remote location.	• **MAC-397IF** (Interface) • Parts for circuit such as relay box, lead wire, etc. (to be purchased locally)
2 Remote Display of Operation Status • The On/Off status of air conditioners can be confirmed remotely. (1 and 2 can be used in combination)		Connect the interface to the air conditioner. Then connect the locally purchased remote controller to the terminal in the interface.	The operation status (On/Off) or error signals can be monitored from a remote location.	• **MAC-397IF-E** (Interface) • Parts for circuit to be purchased locally (DC power source needed)

For P Series and S Series Indoor Units

	System Examples		Details	Major Optional Parts Required
	Wired remote controller	Wireless remote controller		
A 2-remote Controller Control With two remote controllers, control can be performed locally and remotely from two locations.	 (Example of 1 : 1 system)	 (Example of Simultaneous Twin)	• Up to two remote controllers can be connected to one group. • Both wired and wireless remote controllers can be used in combination.	• Wired Remote Controller **PAR-21MAA** • Wired Remote Controller Kit for PKA **PAR-21MAAT-E** • Wireless Remote Controller **PAR-SL97A-E** (Except for SLZ) • Wireless Remote Controller Kit for PCA **PAR-SL99B-E**
B Operation Control by Level Signal Air conditioner can be started/stopped remotely. In addition, On/Off operation by local remote controller can be prohibited/permitted.	 (Example of 1 : 1 system x 2)	 (Example of 1 : 1 system x 2)	• Operation other than On/Off (e.g., adjustment of temperature, fan speed, and airflow) can be performed even when remote controller operation is prohibited. • Timer control is possible with an external timer.	• Adapter for remote On/Off **PAC-SE55RA-E** • Relay box (to be purchased locally) • Remote control panel (to be purchased locally)
C Operation Control by Pulse Signal	 (Example of 1 : 1 system x 2)	 (Example of 1 : 1 system x 2)	• The pulse signal can be turned On/Off. • Operation/emergency signal can be received at a remote location.	• Connector cable for remote display **PAC-SA88HA-E / PAC-725AD (10 pcs. x PAC-SA88HA-E)** • Relay box (to be purchased locally) • Remote control panel (to be purchased locally)
D Remote Display of Operating Status Operating status can be displayed at a remote location.	 (Example of 1 : 1 system)	 (Example of Simultaneous Twin)	• Operation/emergency signal can be received at a remote location (when channeled through the **PAC-SF40RM** → no-voltage signal, when channeled through the **PAC-SA88HA-E** → DC 12V signal).	• Remote display panel (to be purchased locally) • Connector cable for remote display **PAC-SA88HA-E / PAC-725AD (10 pcs. x PAC-SA88HA-E)** • Relay box (to be purchased locally) • Remote operation adapter **PAC-SF40RM** *Unable to use with wireless remote controller • Remote display panel (to be purchased locally)
E Timer Operation Allows On/Off operation with timer *For control by an external timer, refer to B Operation Control by Level Signal.	 (Example of 1 : 1 system)		• **Weekly Timer:** On/Off and up to 8 pattern temperatures can be set for each calendar day. (Initial setting) • **Simple Timer:** On/Off can be set once each within 72 hr in intervals of one hour. • **Auto-off Timer:** Operation will be switched off after a certain time elapse. Set time can be changed from 30 min. to 4 hr. at 30 min. intervals. *Simple Timer and Auto-off Timer cannot be used at the same time.	Standard functions of **PAR-21MAA**

M SERIES

SELECTION

Line-up includes seven series.
Choose the model that best matches room conditions.

STEP 1 SELECT SERIES

A multiple series line-up to choose from, each with various outstanding features. In addition to inverter-equipped models, constant-speed, floor-standing and cassette models can be selected. Choose the best series to match usage needs.

Wall-mounted Units

MSZ-F SERIES

DC Inverter | Super energy-saving | EER A | COP A | 25/35 Ultra-quiet | Cooling Heating | MXZ connection

MSZ-G SERIES

DC Inverter | 25-50 EER A | 25-50 COP A | 22-35 Ultra-quiet | Cooling Heating | MXZ connection

MSZ-H SERIES

DC Inverter | VA EER A | VA COP A | Cooling Heating

MSH-G SERIES

20-35 EER A | 20-35 COP A | Cooling Heating

MS-G SERIES

20/25 EER A

Floor-standing/Cassette Units

MFZ SERIES

DC Inverter | 25/35 EER A | 25/35 COP A | Cooling Heating | MXZ connection

MLZ SERIES

DC Inverter | Cooling Heating | MXZ connection ✻ MXZ connection only

DC Inverter Inverter

Super energy-saving Super energy-saving

EER A | COP A Energy Rank A

Ultra-quiet Ultra-quiet operation

Cooling Heating Cooling and heating operation

MXZ connection Compatible for connection to MXZ Series system

✻ To confirm compatibility with the MXZ Series multi-type system, refer to the MXZ Series page.

STEP 2 SELECT OUTDOOR UNIT

Some outdoor units in the line-up have heaters for use in cold regions. Units with an "H" in the model name are equipped with heaters.

Heater Installed

MUZ-GE25/35/42VAH

MUZ-GE50VAH

SUZ-KA25/35VAH

Selecting a Heater-equipped Model
In regions with the following conditions, there is a possibility that water resulting from condensation on the outdoor unit when operating in the heating mode will freeze and not drain from the base.
1) Cold outdoor temperatures (temperature does not rise above 0°C all day)
2) Areas where dew forms easily (in the mountains, valleys(surrounded by mountains), near a forest, near unfrozen lakes, ponds, rivers or hot springs), or areas with snowfall
To prevent water from freezing in the base, it is recommended that a unit with a built-in heater be purchased. Please ask your dealer representative about the best model for you.

KIRIGAMINE

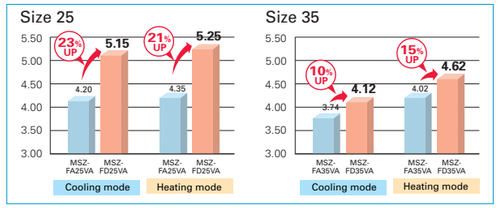
MSZ-F SERIES

The FD Series is designed for optimum cooling/heating performance as well as operational comfort. Quiet, energy-saving operation is supported by some of Mitsubishi Electric's latest technologies. Advanced functions such as i-see Sensor temperature control and the Plasma Duo air filtering and purification system raise room comfort levels to new heights.

High Energy Efficiency

DC Inverter EER A COP A

Power consumption has been reduced by approximately 20% for the cooling and heating modes thanks to the incorporation of our newest inverter technologies. The high energy efficiency of the Size 25 units has obtained a rating of more than 5.0 for both coefficient of performance (COP) and energy efficiency rating (EER).



KEY TECHNOLOGIES

Rare Earth Magnet Rotor for Compressor

Mitsubishi Electric compressor motors utilize a rotor made using a rare earth magnet, the magnetic flux density of which is approximately threefold that of the previous ferrite magnet. This rare metal magnet provides high density and increased magnetic force, which leads to a reduction in energy consumption.

Rare Earth Magnet (for MSZ-FD)

Samarium Magnet Rotor Introduced for DC Fan Motor of Outdoor Units

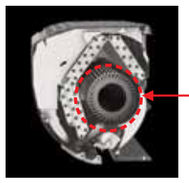
The rotor magnet for the DC motors of the outdoor units has been changed from ferrite to samarium, which has higher magnetic flux. Additionally, the magnet is cut and specially shaped for better efficiency.

Quiet Operation

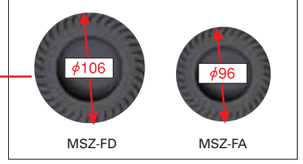
Minimum indoor unit operating noise has been reduced by equipping the unit with a larger blower fan that enables the motor speed to be reduced without reducing the air conditioning capacity.

		MSZ-FD	MSZ-FA
25 VA	Cooling	1dB less 20dB	21dB
	Heating	1dB less 20dB	21dB
35 VA	Cooling	1dB less 21dB	22dB
	Heating	1dB less 21dB	22dB

Side view of MSZ-FD



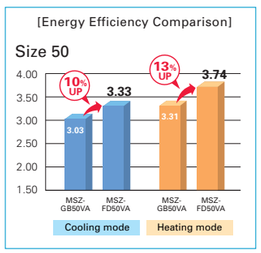
Line flow fan comparison



Introducing Size 50 Units Equipped with Deluxe Inverter Series

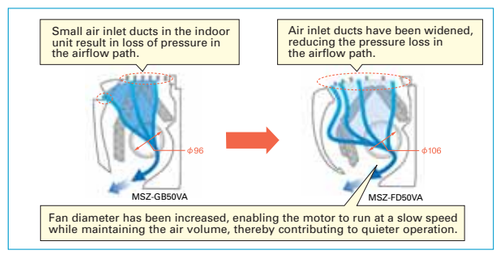
High Energy Efficiency – "Energy Rank A" for All Models

Applying the latest inverter technologies, such as the use of a rare earth magnet in the rotor of the DC fan motor, has resulted in remarkably high energy efficiency and an "Energy Rank A" rating for cooling and heating performance.



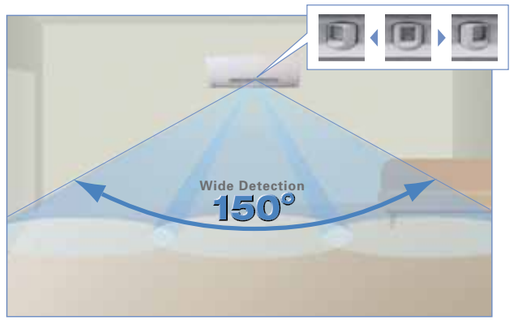
Amazingly Quiet Operation – Redesigned for Performance

The MSZ-FD50VA has a larger fan diameter, wider air inlet in the upper section of the indoor unit and a revised airflow path, which has enabled operation noise to be reduced by 3dB in both cooling and heating modes.



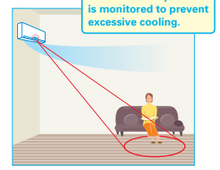
i-see Sensor

Sensor sweeps from side-to-side automatically monitoring the floor temperature over a wide area spanning 150°.



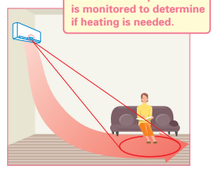
Conventional air conditioners monitor the air temperature at the top of a room to control room temperature and fail to take floor-level temperature, that which has the strongest impact on room comfort, into consideration. The "i-see Sensor" monitors floor-level temperature to ensure that optimum comfort is obtained throughout the room.

Cooling



Cold air migrates to the floor, and this can result in excessive cooling. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent over-chilling.

Heating



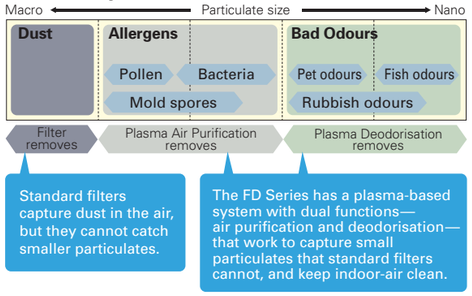
Warm air migrates to the ceiling, thereby failing to warm the floor-level zone. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent insufficient warming.

Plasma Duo Filter Systems

FD Series air conditioners are equipped with state-of-the-art air cleaning technologies including a pre-filter and two plasma-based filtering mechanisms (Plasma Duo) that virtually deodorise and purify the air.

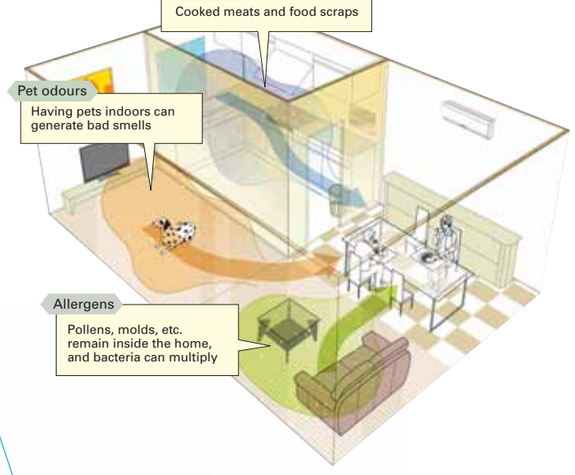
Highly insulated, airtight residences tend to trap odours, allergens like pollen and mold, and bacteria generated in daily life inside the home.

[Effective Range]



Standard filters capture dust in the air, but they cannot catch smaller particulates.

The FD Series has a plasma-based system with dual functions—air purification and deodorisation—that work to capture small particulates that standard filters cannot, and keep indoor-air clean.



Plasma electrode located here

Plasma Electrode

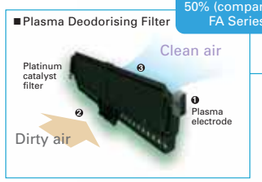
A plasma electrode is mounted inside the indoor unit. An electro-discharge process generates ozone and plasma, which then work together with the two special filters to produce dynamic plasma air-purifying performance.

Plasma Deodorisation

A nanometre scale-meshed platinum catalyst deodorising filter catches odourous particulates that are in the air. Once trapped, the particulates are decomposed and odours eliminated by ozone generated from a plasma electrode.

Deodorising time reduced approx. 50% (compared to FA Series)

■Plasma Deodorising Filter



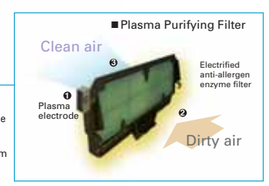
❶Plasma electrode produces ozone
❷Odour-causing particulates trapped
❸Odour-causing particulates decomposed by ozone

❶Plasma electrode produces plasma
❷Plasma gives particulates a negative charge
❸Positive side of the electret filter attracts the negatively charged particulates and enzymes neutralise them

Plasma Air Purification

An electrified anti-allergen enzyme filter is incorporated. A combination of static electricity charged into the filter and plasma generated by the plasma electrode is used to catch bacteria, pollen and other allergens in the air, which are then neutralised by the enzymes in the filter.

■Plasma Purifying Filter

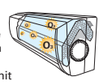


Mold Fighter

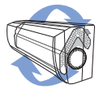
MSZ-FD Series units are equipped with a "Mold Fighter" function designed to suppress the growth of mold spores. The plasma electrode generates ozone, which then attacks the spores and reduces growth by approximately 20%.

■ Mold Fighter Mechanism

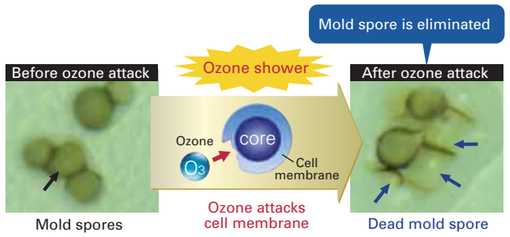
Step 1
Following the use of the cooling mode, the ozone generated by the plasma electrode is distributed throughout the indoor unit in approximately 15 minutes.



Step 2
The fan is turned on, and the heat exchanger is dried in approximately 25 minutes.



✻ Fan speed → very low



What is Ozone?

Ozone (O_3) is a very unstable molecule that slowly transforms itself into oxygen (O_2) and nascent oxygen (O). Splitting the nascent oxygen creates the oxidising ability to sterilise and deodorise.

O_2 + ⚡ → O_3 → O_2 + (O)

Oxygen · High voltage · Ozone · Oxygen · Nascent Oxygen

Ozone density during the ozone shower is safe

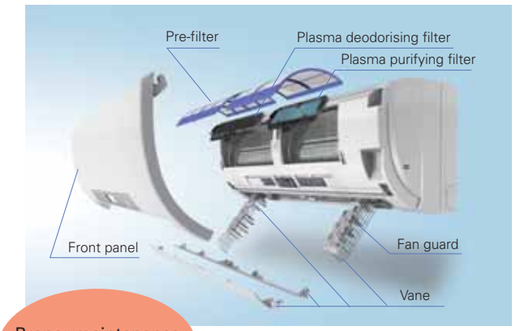
◆ 0.1ppm inside indoor unit
→ Within the upper limit of the acceptable range for ozone gas density in work environments.
[Safety limit advised by the Japan Society for Occupational Health.]

◆ 0.01ppm or lower in room
→ Below the average ozone density in coastal or forested regions.

Quick Clean Body

The front panel is detachable and the airflow vents can be opened without requiring any special tools, making air conditioner cleaning and maintenance easier than ever. Periodic cleaning of the air conditioner is recommended to ensure that operation efficiency and energy savings are maximised.

The inner fan is placed within ready reach, for handy cleaning.



Proper maintenance keeps electricity cost low

The exclusive Quick Clean Kit is easily connected to household vacuum cleaners for quick and convenient cleaning of the heat exchanger and fan.✻

✻ Wearing gloves is highly recommended when cleaning the heat exchanger, because touching it with bare hands can cause injury.

White & Silver Indoor Units

Indoor units are available in two colours, white or silver. Choose the colour that best matches your room interior.

MSZ-G SERIES

The standard model MSZ-G units provide excellent energy savings and operation is impressively silent. A vast series line-up is ready to ensure comfortable room environments in response to your air conditioning needs.

Wide Line-up

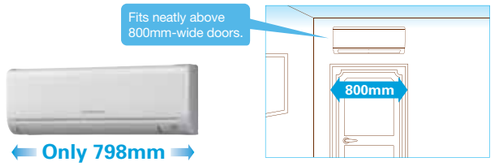
Seven different indoor units (Model 22-71) and 10 outdoor units are available to meet your diversified air conditioning needs.

MSZ-GE22/25/35/42/50VA

MSZ-GA60/71VA

Stylish and Compact

An elegant, high-quality look is achieved through the new stylish design adopted for the Model 22-50 indoor units. The simple ergonomic square shape and pure white color express a sense of sophistication that matches well with virtually any interior décor.



High Energy Efficiency

DC Inverter | 25-50 EER A | 25-50 COP A

"Energy Rank A" Achieved

The combination of cutting-edge inverter technologies and a highly efficient heat exchanger result in remarkable energy efficiency. Even when equipped with the very convenient and compact 798mm-wide indoor unit—which can be installed in small spaces like above doorways—all models* have an "Energy Rank A" rating.

* Model sizes 25-50.

Quiet Operation

Only 19dB

A "Silent Mode" setting has been added to the fan speed settings, ensuring super-quiet operation below 20dB for model sizes 35 and under. Perfect for the bedroom; it's so quiet you'll check to see if it's on.

Comparison of minimum Indoor SPL (dB)

Size	25		35		42		50

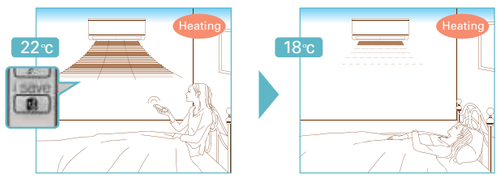
MSZ-GE (Silent)	19	19	19	19	26	26	28	28

"i save" Mode

22-50 i save

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable, waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.



✻Temperature can be preset to 10°C when heating in the "i-save" mode (except when connected to MXZ-8A140VA).

Outdoor Units for Cold Region

Single split-type outdoor units are available in both standard and heater-equipped units. An electric heater is installed in each unit to prevent freezing in cold outdoor environments.

MSZ-H SERIES

MSZ-HC25/35VA(B)

Compact, high-performance indoor and outdoor units and advanced inverter technologies provide superior energy savings and comfort in all rooms.

Stylish Design with Flat Panel Front

A stylish flat panel design is employed for the front of the indoor unit. The simple look matches room aesthetics.

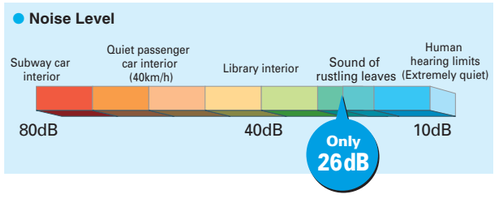
Advanced Inverter Control – Efficient Operation All the Time

DC Inverter · VA EER A · COP A

Mitsubishi Electric's cutting-edge inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises an "Energy Rank A" rating.

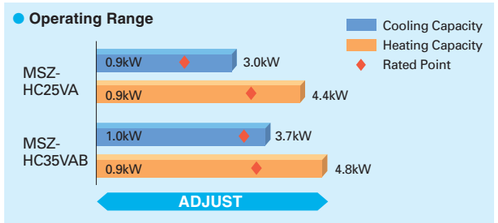
Silent Operation

Quiet, relaxing space is within reach. Operational noise is a low 26dB. Operation is so silent you might even forget the air conditioner is on.



Wide Operating Range

All units offer powerful start-up output to quickly eliminate the gap between temperature setting and actual room temperature. From cooling on the hottest summer day to heating on a cold winter night, once the desired temperature is reached, a stable and comfortable room temperature is maintained.



Compact Units

The widths of both indoor and outdoor units are compact, making installation in small, tight spaces possible.

Indoor Unit: MSZ-HC25VA/35VA(B)

Only 788mm wide

Outdoor Unit: MUZ-HC25VA/35VA(B)

Only 684mm wide

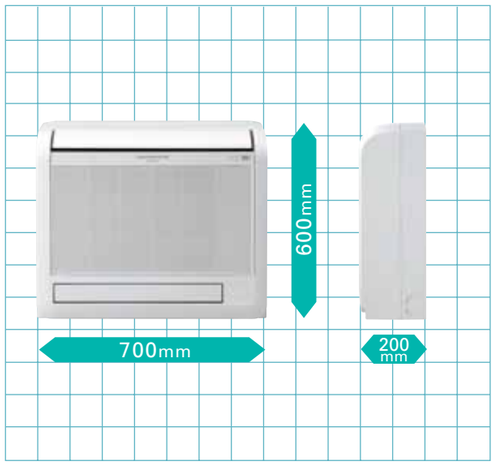
MFZ SERIES

A unique innovation in air conditioning that fits perfectly into any room in the home.
A sophisticated ergonomic design combined with powerful yet comfortable performance and silent operation.

MFZ-KA25/35/50VA

Slim and Trim Body

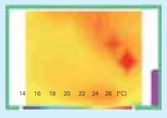
The body of the MFZ is slim and trim, making it ideal for use in virtually any room. The front panel is removable and made of washable material, making maintenance and cleaning easier than ever. Periodic maintenance helps to keep the unit clean and beautiful, as well as ensure maximum energy savings.



Optimum Air Distribution

A powerful blower provides optimum distribution of air from the upper and lower air outlets. The result is a comfortable environment with an even temperature throughout the room. There are five settings for the upper vane and four speed settings for the fan, all of which can be set using the remote controller.

The air from the upper and lower outlets is carefully controlled and distributed evenly to all corners of the room. In heating mode, more warm air is directed towards the floor level for greater overall comfort.



Advanced Inverter Control – Efficient Operation All the Time

DC Inverter | 25/35 EER A | 25/35 COP A

Mitsubishi Electric's cutting-edge inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises increased energy savings.

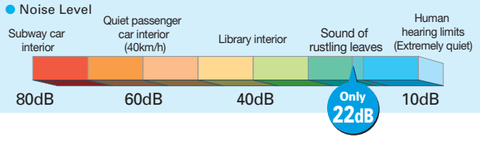
Quiet Operation

Mitsubishi Electric air conditioners are renowned as some of the quietest models available. The floor-standing units are no exception. Quiet 22dB operation* creates a silent, comfortable space where people don't even notice that the air conditioner is running.

Only 22dB*

*2.5kW class

● Noise Level



Trouble-Free Installation and Maintenance

Using the original installation plate that comes as standard equipment, installation of the unit is a snap. Levelling adjusters are provided, preventing damage to the wall. Generous pipe length (20–30 metres) is provided, so there is no need to worry about distance to the outdoor unit. All units are equipped with an automatic self-diagnostics function as well. Simply access the trouble log recall mode for instant troubleshooting.

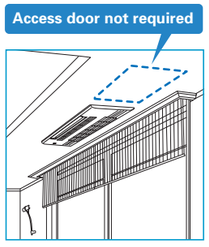
MLZ SERIES

Introducing a new type of ceiling cassette for the Multi-Split Series with streamed interior dimensions and a sharp, sleek appearance.

MLZ-KA25/35/50VA

Ceiling Mounted

Installing the ceiling-mounted MLZ Series unit in a room creates a more spacious feel that enhances room comfort. This overhead format is also an excellent solution when lighting equipment is installed at the centre of the room and fixtures such as book shelves are mounted on wall surfaces.



Slim Body

The new units are designed with a slim body (only 175mm high), ensuring easy installation even when low ceiling cavities limit installation space. The need for ceiling cavity service space is also eliminated, further reducing the dimensions required for installation.

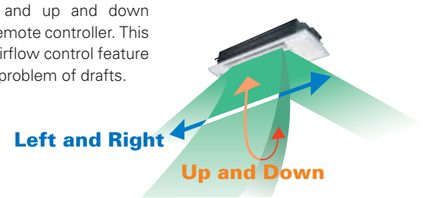
Set Airflow According to Ceiling Height

Dual-level airflow selection is engineered to accommodate specific ceiling heights. This is a key feature for adjusting airflow effectively when it is either too strong or too weak due to being mismatched with the height of the ceiling.

	25	35	50
Standard	2.4m	2.4m	2.4m
High ceiling	2.7m	2.7m	2.7m

Auto Vane Control

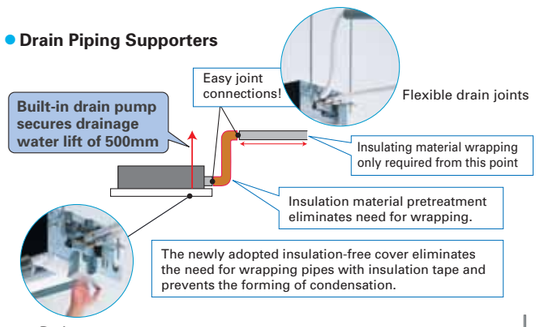
Outlet vanes can be moved left and right, and up and down using the remote controller. This improved airflow control feature solves the problem of drafts.



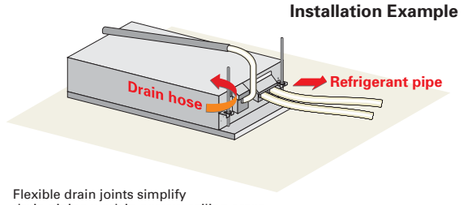
Easy Installation

A built-in drain pump (500mm lift) and flexible drain joints make attaching the drain hose in the ceiling cavity easy, resulting in simple and fast installation. Tight yet flexible fittings eliminate the need of wrapping with heat-insulation tape, and ensure that pipe and drain cover connections are free of condensation.

● Drain Piping Supporters



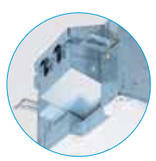
Installation Example

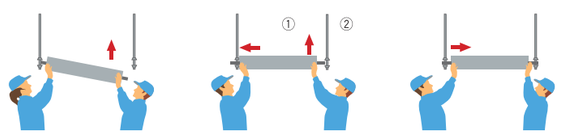


Flexible drain joints simplify drain piping work in narrow ceiling areas

● Easy Mounting Plate

Suspension work simplified with well-designed mounting plates





Secure one side

① Push the unit to the other side
② Secure the opposite side

Move unit to the centre

S

SERIES

SELECTION

Series line-up consists of two types of indoor units.
Choose the model that best matches room conditions.

STEP 1 SELECT INDOOR UNIT

Select the optimal unit and capacity required to match room construction and air conditioning requirements.

Units with Wired Remote Controller

SLZ-KA25VA
SLZ-KA35VA
SLZ-KA50VA

*Requires SLP-2AAW grille.

Units with Wireless Remote Controller

SLZ-KA25VAL
SLZ-KA35VAL
SLZ-KA50VAL

*Requires SLP-2ALW grille.

SEZ-KD60VA
SEZ-KD71VA

Units with Wireless Remote Controller

SEZ-KD25VAL
SEZ-KD35VAL
SEZ-KD50VAL
SEZ-KD60VAL
SEZ-KD71VAL

STEP 2 SELECT OUTDOOR UNIT

There is one outdoor unit for respective indoor units.

SUZ-KA25/35VA

SUZ-KA50/60/71VA

✻ To confirm compatibility with the MXZ Series multi-type system, refer to the MXZ Series page.

SLZ SERIES

SLZ-KA25/35/50VA(L)

Compact, lightweight ceiling cassette units with 4-way air outlets provide maximum comfort by evenly distributing airflow throughout the entire room.

Compact Panel Size

The attractive SLZ Series ceiling cassette units offer a slim 570mm width and a 4-way air outlet. The size and shape are a perfect match for ceilings made using 2'x2' construction, and the light 16.5kg package makes installation easy.

The compact body matches 2'x2' (600mm x 600mm) ceiling construction specifications.

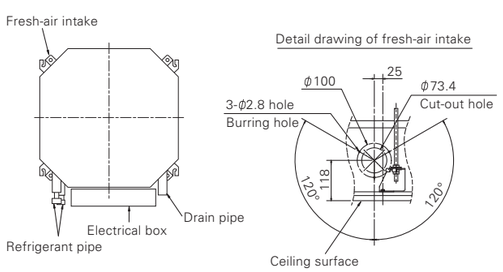
Advanced Inverter Control – Efficient Operation All the Time

DC Inverter 25/35 EER A 25/35 COP A

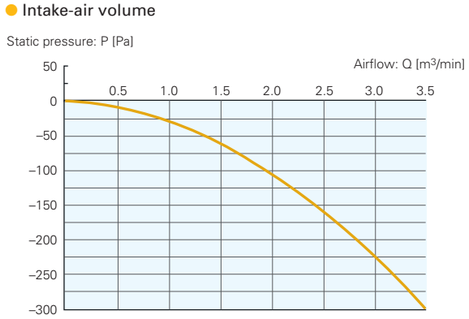
Mitsubishi Electric's cutting-edge inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises increased energy savings.

Fresh-air Intake

A duct hole is provided in the main body, making it possible to intake fresh air from outside.



● Intake-air volume



Note: Intake-air volume should be 20% or less of overall air volume in order to prevent condensation.

SEZ SERIES

SEZ-KD25-71VA(L)

This concealed ceiling-mounted indoor unit series is compact, and fits easily into rooms with lowered ceilings. Highly reliable energy-saving performance makes it a best match choice for concealed unit installations.

Compact Ceiling-concealed Units

Only the intake-air grille and outlet vents are visible when using this ceiling-concealed indoor unit. The rest of the unit is conveniently hidden in the ceiling cavity, essentially leaving the ceiling and walls free of bulky looking devices and maintaining a high-class interior décor. The compact units require minimal space and can be installed in buildings with lowered ceilings, where exposed units were the rule in the past.

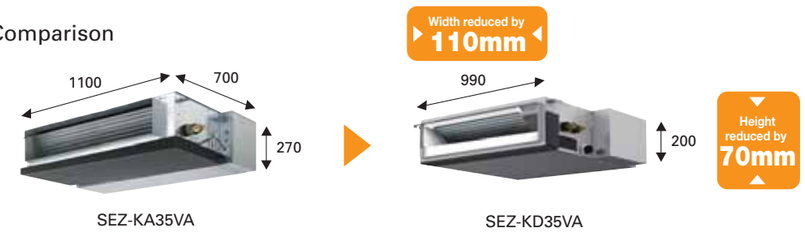
Dimension Comparison



"Energy Rank A" Rating

DC Inverter 25/35 EER A 25/35 COP A

Incorporating the latest inverter technologies has resulted in the SEZ Series achieving an "Energy Rank A" rating for both the 25 and 35 models.

Increased Selection of Fan Speeds and Static Pressure Levels

DC fan motor settings have been increased to accommodate more application needs. Three fan speed settings (Low, Medium and High) and four static pressure levels (5, 15, 35 and 50Pa) are now available.

	External Static Pressure
SEZ-KC25VA	5 Pa
SEZ-KA35-71VA	30/50 Pa
SEZ-KD25-71VA	5/15/35/50 Pa

Four Levels Available for All Models

We've lowered the minimum static pressure level, resulting in less room noise when the optimum static pressure is selected.

	SPL (Low Fan Mode)	
	SEZ-KA	SEZ-KD
External Static Pressure	30 Pa	15 Pa
35	30dB	23dB
50	31dB	30dB
60	32dB	30dB
71	32dB	30dB

Maximum noise reduced by 7dB

Drain Pump (Optional)

The PAC-KE07DM-E drain pump is now available as an option. With the pump, a drain hose length of up to 550mm can be used, adding to increased installation possibilities.

P

SERIES

SELECTION

Line-up includes a selection of eight indoor units and four series of outdoor units.
Easily construct a system that best matches room air conditioning needs.

STEP 1 SELECT INDOOR UNIT

Select the optimum indoor unit and capacity based on room size and shape.

4-way ceiling-cassette
PLA-BA

Ceiling-concealed
PEAD-JA

Floor-standing
PSA-GA

Ceiling-suspended
PCA-KA

Professional Kitchen
PCA-HA

Wall-mounted
PKA-HAL

Wall-mounted
PKA-KAL

Ceiling-concealed
PEA-GA

STEP 2 SELECT OUTDOOR UNIT

The best outdoor unit for the system depends on the combination of functions desired (e.g., energy savings, system capacity, long pipe length).
Check the specifications of the system you need, and then select the optimum outdoor unit series.

Power Inverter

Fixed-speed (Cooling Only)

PU-P125/140

PU-P71/100

✻ To confirm compatibility with the MXZ Series, refer to the MXZ Series page.

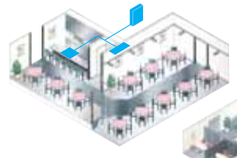
STEP 3 SELECT COMBINATION

Choose the installation pattern for the indoor units. (In the case of a multi-system, distribution piping is necessary, so please select the necessary piping as well.)

Single System

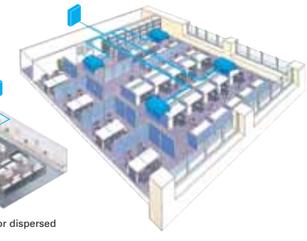
Simultaneous Multi-System

Twin Allows simultaneous operation of two indoor units on one floor.



Triple Can cover a large-scale space or dispersed installation on the same floor.

Quadruple Realises the optimum temperature distribution even in a large space.



Connectable Combinations for Inverter Units (PUHZ-RP / PUHZ-P)

Power Inverter SERIES

The highly energy-efficient Power Inverter Series has reached a new level of energy savings with the incorporation of new technologies and new body design. The side-flow configuration of the integrated outdoor unit body, a maximum piping length of 120m and replacement technologies simplify installation.

Advanced Energy-saving Performance

Utilizing the latest energy-saving technologies with DC inverter technology at the core, a high level of energy-saving performance is achieved. Combining the many energy-saving technologies, an "Energy Rank A" rating for both cooling and heating has been achieved.

Energy Rank (Cooling/Heating)

Series		35	50	60	71	100	125	140

Energy Rank A/A 25 combinations (when connected 1:1) **3-fold increase**

ADVANCED ENERGY-SAVING TECHNOLOGIES

Highly efficient fan and grille for outdoor unit

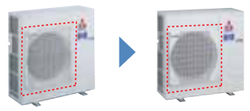
The shapes of the fan and grille of the outdoor unit were redesigned, realising an increase in blowing capacity and more efficient heat exchange while maintaining the same operating noise level.

Outdoor unit fan opening increased <RP100–250>

The diameter of the opening for the fan in the outdoor unit has been increased from 490 to 550mm. Blowing capacity has been increased while maintaining the same fan rotation speed.

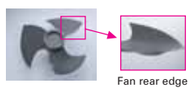
Grille shape changed <RP60–250>

The shape of the air outlet grille has been changed to reduce pressure loss. This has helped improve heat exchange performance.



Inflexed fan <RP100–250>

Adoption of a fan with improved ventilation characteristics and a newly designed rear edge that suppresses wind turbulence raises fan operation efficiency.

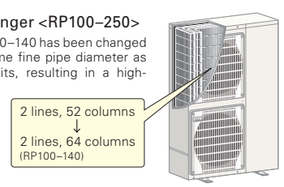


Highly efficient heat exchanger

A high density and increase in surface area have improved the heat-exchange efficiency of the heat exchanger.

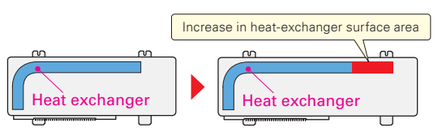
High-density heat exchanger <RP100–250>

The pipe diameter for the RP100–140 has been changed from 9.52 to 7.94mm, the same fine pipe diameter as that used for RP200–250 units, resulting in a high-density heat exchanger.

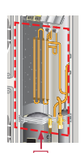


Heat-exchange surface area increased <RP100–250>

Heat exchanger size extended horizontally, increasing the surface area.

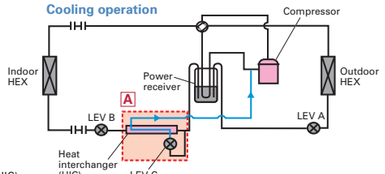


Heat Interchanger (HIC) Added <RP140>

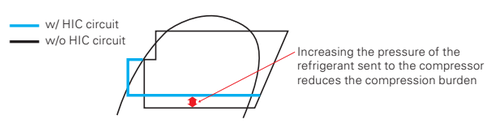


Heat Interchanger (HIC)

Cooling operation



An HIC circuit has been added to improve energy efficiency during cooling operation. Liquid refrigerant is rerouted, transformed into a gas state and injected back into the system to increase overall pressure of the refrigerant being sent to the compressor, thereby reducing the load on the compressor and raising efficiency.



Side-flow Outdoor Units

All operating capacities have been unified to the side-flow configuration. Even for locations requiring large capacities, the small footprint of these outdoor units enable them to be used anywhere.

PUHZ-RP35/50 PUHZ-RP60/71 PUHZ-RP100/125/140/200/250

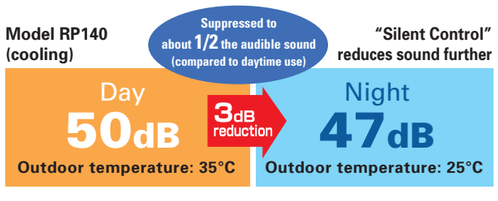
Silent Control

Fan speed during cooling operation is automatically reduced when the outdoor temperature drops, resulting in quiet, low-noise operation. Operating noise is reduced by 3dB, to half of the audible sound.

Model RP140 (cooling)

Suppressed to about 1/2 the audible sound (compared to daytime use)

"Silent Control" reduces sound further



3-phase Power-supply Inverter (RP100–250YHA)

Incorporation of a 3-phase power supply realizes a dramatic reduction in operating current. This special technology is equipped in outdoor units to ensure compliance with electromagnetic compatibility regulations in Europe.

Operating current comparison (for combinations using 4-way ceiling cassettes)

Power Supply		10kW	12.5kW	14.0kW
3-phase	Rated (cooling)	4.5	6.5	7.7
	Rated (heating)	4.6	6.3	7.6
	Max.	9.0	10.5	12.1
	Breaker size	16	16	16
1-phase	Rated (cooling)	11.0	16.6	19.7
	Rated (heating)	11.2	15.9	19.5
	Max.	27.5	27.5	29.1
	Breaker size	32	32	40

Long Pipe Length

The additional refrigerant volume enables piping lengths of up to 120m (RP200/250), thereby making installation easier.

Model	Max. Pipe Length	Max. Height Difference
PUHZ-RP35/50	50m	30m
PUHZ-RP60/71	50m	30m
PUHZ-RP100/125/140	75m	30m
PUHZ-RP200/250	120m	30m

When pipe length exceeds 80m, separate power sources are required for the indoor and outdoor units. (An optional power-supply terminal kit is needed for indoor units with no power supply terminal block.)

Cleaning-free Pipe Reuse Technology

Ability to use existing piping reduces pipe waste and replacement time

No Need to Clean at the Time of System Renewal

Chloride residue builds up in existing pipes and becomes a source of trouble. The incorporation of various original Mitsubishi Electric technologies has resulted in the introduction of "cleaning-free pipe reuse."

Why can't existing piping be used?

R22 refrigerant leaves a chloride residue that builds up in existing piping.
If left as is, the refrigerant oil will deteriorate.

■ **At Time of Renewal**

Problem 1	Problem 2	Result
Former refrigerant R22	High operating temperature	New refrigerant R410A
Chloride residue +	Temperature of moving components in compressor increases →	Chloride residue and high heat generated during operation deteriorate refrigerant oil

Must clean piping for models not compatible with "cleaning-free" technology

Mitsubishi Electric's Original Replacement Technologies

Countermeasure for Problem 1

Technology 1
Alkyl Benzene Oil

Countermeasure for Problem 2

Technology 2
Friction Reduction (moving parts in compressor)

Existing piping can be used without cleaning

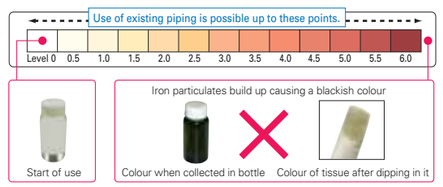
Technology 1
Original Refrigerant Oil
With a scientifically high level of stability, the adoption of "alkyl benzene oil" for use in RP35-50 units prevents deterioration due to chloride residue.

Low-deterioration alkyl benzene oil

Technology 2
Friction Reduction
Friction inside the compressor is reduced by using an original Mitsubishi Electric technology called the "Heat Caulking Fixing Method" or coating the edge of the blade in the scroll compressor, thereby suppressing the increase in temperature that causes refrigerant oil deterioration.

Cautions when using existing piping

- Check whether or not existing units can be used (Cleaning-free pipe reuse technology cannot be used with units which have trouble record).
- Chloride residues mixing with refrigerant oil will cause deterioration and change the oil colour to yellow. This can be resolved by installing Power Inverter Series units equipped with Cleaning-free Pipe Reuse technologies. However, in cases iron particulates generated by compressor trouble are existed in the system, regardless of how dark the oil colour is, please clean the existing pipes.
- When removing an old air conditioning unit, please make sure to perform the pump-down process and recover the refrigerant and refrigerant oil.
- Check to ensure that the piping diameter and thickness match Mitsubishi Electric specifications.
- Check to ensure that the flare is compatible with R410A.



PLA SERIES

PLA-RP35/50/60/71/100/125/140

A complete line-up including deluxe units that offer added energy savings. The incorporation of wide air-outlet and the “i-see Sensor” enhances airflow distribution control, achieving an enhanced level of comfort throughout the room. The synergy of higher energy efficiency and more comfortable room environment results in the utmost user satisfaction.

Deluxe 4-way Cassette Line-up

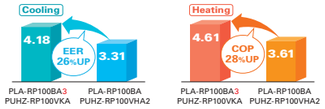
For customers seeking much higher energy-savings, Mitsubishi Electric offers a variety of deluxe units in this series line-up: models 75–125. Compared to the standard model (100), deluxe models provide an additional energy savings of approximately 20%, contributing to a significant reduction in electricity costs.

■ **Line-up**

Series \ Model	35	50	60	71	100	125	140
Deluxe 4-way Cassette	PLA-RP 35BA	PLA-RP 50BA	PLA-RP 60BA	NEW PLA-RP71 BA2	NEW PLA-RP100 BA3	NEW PLA-RP125 BA2	NEW PLA-RP 140BA2
Standard 4-way Cassette				PLA-RP71BA	PLA-RP100BA	PLA-RP125BA	

■ **Energy Efficiency Comparison**

Compared to the standard model (100), the deluxe 4-way ceiling cassette power inverter series provides an approximate 20% improvement in energy efficiency, adding to even further reductions in electricity consumption.



PLA-RP100BA3 PUHZ-RP100VKA / PLA-RP100BA PUHZ-RP100VHA2 (Cooling)

PLA-RP100BA3 PUHZ-RP100VKA / PLA-RP100BA PUHZ-RP100VHA2 (Heating)

■ **Key Technologies for Higher Energy Efficiency**

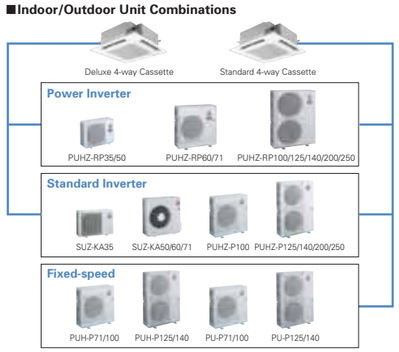
New Heat Exchanger Design

Heat exchanger fine size and pitch have been changed, raising energy efficiency.

Pre-grooved Piping

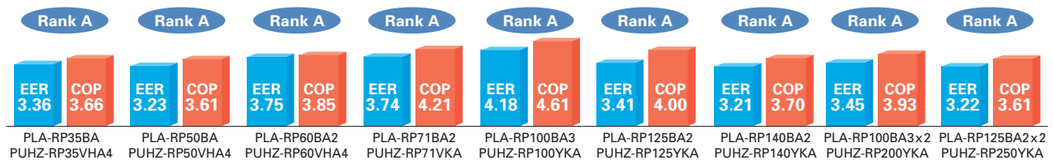
High-performance pre-grooved piping is utilized, increasing the heat exchange area.

■ **Indoor/Outdoor Unit Combinations**



“Rank A” Energy Savings Achieved for Range of Full-capacity Models

In addition to the deluxe indoor units, models in the full-capacity range have also attained the “Rank A” energy savings rating. This contributes greatly to reducing electricity costs regardless of building size.



“i-see Sensor” temperature-sensing technology improves energy efficiency and enhances room comfort

The “i-see Sensor” is an innovative Mitsubishi Electric technology that uses a radiation-based sensor to monitor temperature throughout an entire room. When connected to the air conditioner control panel, i-see Sensor works to maximize room comfort.

■ **i-see Sensor Panel**

PLP-6BAE

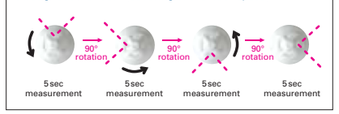
or

■ **Corner Panel Only** (Option)

PAC-SA1 ME-E

■ **i-see Sensor Operation**

The i-see Sensor rotates 90° at intervals of 5sec, accurately measuring the temperature throughout the room (covering entire floor space).



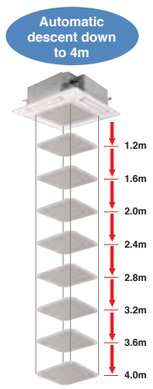
Automatic Grille Lowering Function (PLP-6BAJ)

An automatic grille lowering function is available for easy filter maintenance. Special wired and wireless remote controllers can be used to lower the grille for maintenance.

The grille can be lowered a maximum of 4m from the ceiling in 8 steps, thus enabling easy cleaning of the air filter. Cleaning of the filter is an important factor for saving energy.

Grille Elevation Remote Controller
(comes with the automatic elevation panel)

Wired Remote Controller

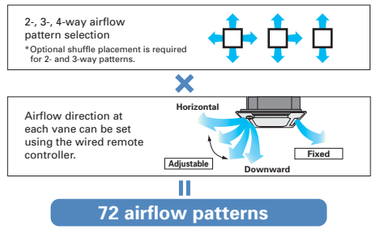


Optimum Airflow

Individual Vane Settings

Optimum airflow settings provide maximum comfort throughout the room.

In addition to the selection of variable airflow patterns (i.e., 2-, 3- or 4-way), this function allows the independent selection of vertical airflow levels for each vane, thereby maintaining a comfortable room environment with even temperature distribution.



Wide Airflow

Wide-angle outlets distribute airflow to all corners of the room.

The outlets are larger than those of previous models and the shape has been improved for better wide-angle ventilation.

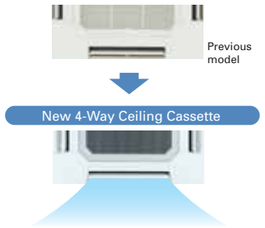


Image of multi-directional air conditioning

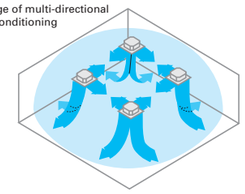


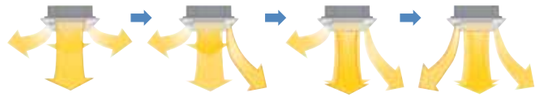
Individual Vane Setting + Wide Airflow

The combination of individual vane setting, which enables the optimal outlet setting for each room layout, and the wide airflow function works to ensure even temperature distribution throughout each room. The result is uniformly comfortable air conditioning.

Wave Airflow – Thoroughly warming all corners of the room!

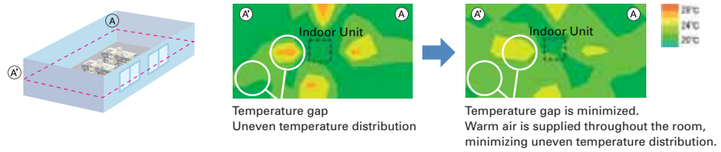
Wave Airflow Operation

“Wave Airflow” is essentially the advanced control of the vanes directing the airflow from the unit. Blown-air is repeated dispersed from the unit in horizontal and downward directions at time-lagged intervals to provide uniform heating throughout the room.



✻ Wave Airflow is possible only when using the heating mode

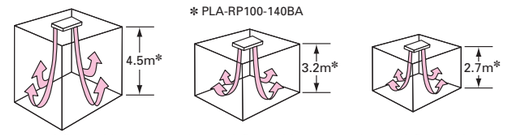
Thermograph of Wave Control Effect



Temperature distribution comparison approximately 20min after turning on a PLA-RP71BA 4-Way ceiling cassette. The measurement point for comparison is a plane 1.2m above the floor.

Equipped with High- and Low-ceiling Modes

Units are equipped with high- and low-ceiling operation modes that make it possible to switch the airflow volume to match room height. The ability to choose the optimum airflow volume makes it possible to optimize the breezy sensation felt throughout the room.



✻ PLA-RP100-140BA

4-way airflow with high-ceiling setting

4-way airflow with standard setting

4-way airflow with low-ceiling setting

■ **Airflow Range**

Airflow pattern \ Model	PLA-RP35–71BA			PLA-RP100-140BA		
	High-ceiling setting	Standard setting	Low-ceiling setting	High-ceiling setting	Standard setting	Low-ceiling setting
4-Way	**3.5**m	2.4m	**2.5**m	**4.5**m	3.2m	**2.7**m
3-Way	**3.5**m	3.0m	**2.7**m	**4.5**m	3.6m	**3.0**m
2-Way	**3.5**m	3.3m	**3.0**m	**4.5**m	4.0m	**3.3**m

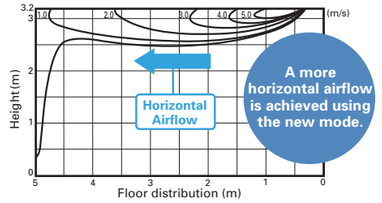
Horizontal Airflow

A “Horizontal Airflow” function has been added to reduce drafty-feeling distribution. Horizontal Airflow prevents cold drafts from striking the body directly, thereby keeping the body from becoming over-chilled.

[Airflow Distribution]

PLA-RP125BA(2)

Flow angle, cooling at 20°C (ceiling height 3.2m)



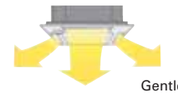
✻ Smudge spots on the ceiling may form where the airflow is not evenly distributed.

Automatic Air-speed Adjustment

An automatic air-speed mode that adjusts airflow speed automatically is adopted to maintain comfortable room conditions at all times. This setting automatically adjusts the air-speed to conditions that match the room environment.

At the start of heating/cooling operation, the airflow is set to high-speed to quickly heat/cool the room.

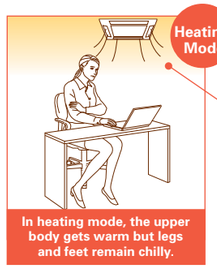
When the room temperature reaches the desired setting, the airflow speed is decreased automatically for stable comfortable heating/cooling operation.



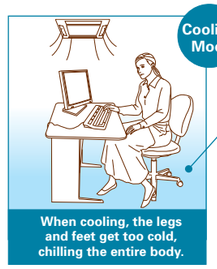
DOES HAVING COLD FEET BOTHER YOU?

The “i-see Sensor” is the answer to your problems!

i-see Sensor



Even though the temperature on the remote controller is at a preset temperature, the temperature at floor level remains cold. As a result, there’s no feeling of getting warmer.

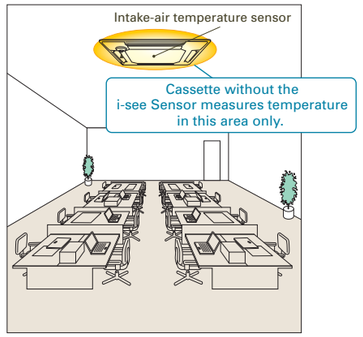


At the beginning of operation, the room is nice and cool; but before long the temperature at floor level drops, causing the feeling of being too cold.

A comfortable room environment cannot be maintained by monitoring only the temperature at the ceiling.

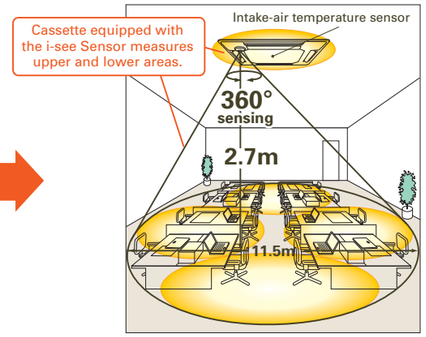
Without “i-see Sensor”

Only intake-air temperature at the ceiling was measured, tending to overlook uneven temperature distribution at floor level.



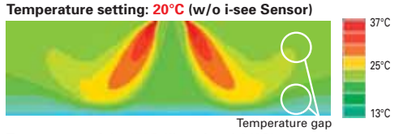
Equipped with New 4-Way Ceiling “i-see Sensor”

Both the floor temperature and intake-air temperature are measured to provide operation that creates a comfortable room environment from ceiling to floor.



In Heating Mode — When you want the temperature felt to be 20°

Temperature setting: 20°C (w/o i-see Sensor)

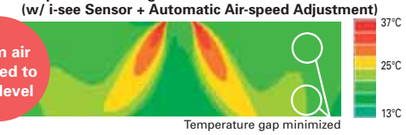


Temperature felt: 17°C (floor level 14°C)

Warm air rises to the ceiling. This causes poor heating at floor level, leaving legs and feet feeling cold.

Temperature setting: 20°C (w/ i-see Sensor + Automatic Air-speed Adjustment)

Room air warmed to floor level



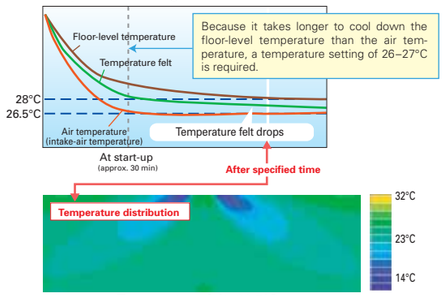
Temperature felt: 20°C (floor level 20°C)

The i-see Sensor detects the temperature at the floor while the Automatic Air-speed Adjustment eliminates uneven temperature distribution by thoroughly warming the air down to the floor.

In Cooling Mode — When you want the temperature felt to be 28°C

Comfortable without excess chilliness

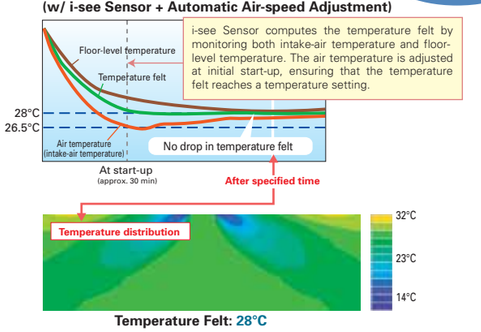
Temperature setting: 26–27°C (w/o i-see Sensor)



Temperature felt: 26.5°C

The temperature felt drops according to the drop in floor-level temperature. If the floor-level temperature is not monitored during long cooling operation, the temperature felt becomes chilly.

Temperature setting: 28°C (w/ i-see Sensor + Automatic Air-speed Adjustment)



Temperature Felt: 28°C

Air temperature is adjusted according to the floor temperature to keep the temperature felt at 28°C.

PKA SERIES

PKA-RP35/50

PKA-RP60/71/100

The compact, wall-mounted indoor units offer the convenience of simple installation, and a large product line-up (RP35-RP100 models) ensures a best-match solution. Designed for highly efficient energy savings, the PKA Series is the answer to your air conditioning needs.

Flat Panel & Pure White Finish

All models have changed from the grill design, adopting the flat panel layout. Pursuing a design that harmonizes with virtually any interior, the unit color has been from white to pure white.

PKA-RP GAL

PKA-RP FAL

PKA-RP HAL

PKA-RP KAL

Compact Indoor Units

Indoor unit width has been reduced by as much as 510mm (RP100). Units take up much less space, greatly increasing installation possibilities.

PKA-RP35/50HAL **92mm DOWN***

*Compared to PKA-RP35/50GAL

PKA-RP60/71KAL **230mm DOWN***

*Compared to PKA-RP60/71FAL

PKA-RP100KAL **510mm DOWN***

*Compared to PKA-RP100FAL

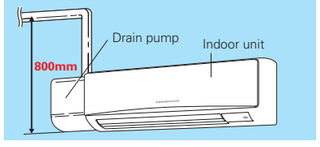
"Rank A" Energy Savings Achieved for Range of Full-capacity Models

Highly efficient indoor unit heat exchangers and improvements in the energy-saving power inverters contribute to an amazing reduction in electricity consumption, and have resulted in models in the full-capacity range attaining the "Rank A" energy savings rating.

✻Comparison with PKA-RP GAL/FAL (equipped with power inverter) energy-saving values.

Drain Pump Option Available with All Models

Installation of the drain pump enables a drain outlet as high as 800mm above the base of the indoor unit. Drain water can be discharged easily even if the surface where the wall-mounted unit does not have direct access outside, increasing the degree of freedom for installation.



Multi-function Wired Remote Controller

In addition to using the wireless remote controller that comes as standard equipment, PAR-21MAA wired remote controllers can be used as well.

✻Connection to a wired remote controller requires PAR-21-MAAT-E (optional).

Main Functions

- Multi-language Display
- Limited Temperature Range Setting
- Auto-off Timer
- Operation Lock
- Weekly Timer

✻For details, please refer to pages 21-22.

PCA-KA SERIES

PCA-RP50/60/71/100/125/140

A stylish new indoor unit design and airflow settings for both high- and low-ceiling interiors expand installation possibilities. Together with exceptional energy-saving performance, these units are the solution to diversified air conditioning needs.

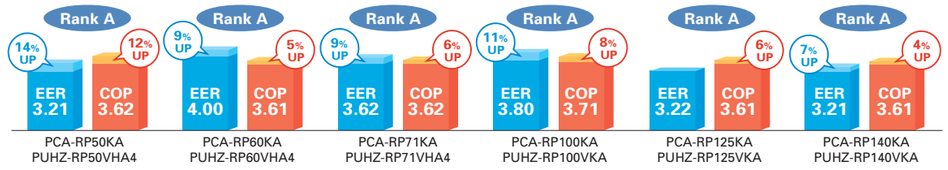
Stylish Indoor Unit Design

A stylish square-like design is adopted for the indoor units of all models. As a result, the units blend in better with the ceiling.

PCA-GA ▶ PCA-KA

"Rank A" Energy Savings Achieved for Range of Full-capacity Models

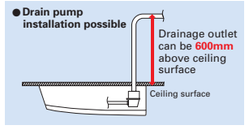
A direct-current (DC) fan motor is installed in the indoor unit, increasing the energy-saving efficiency of this power inverter series and resulting in the full-capacity models achieving a "Rank A" energy savings rating. This contributes to an impressive reduction in the cost of electricity.



✻ Comparison with PCA-RP GA (equipped with power inverter) energy-saving values.

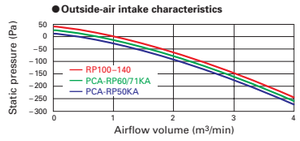
Optional Drain Pump for Full-capacity Models

The pumping height of the optional drain pump has been increased from 400mm to 600mm, expanding flexibility in choosing unit location during installation work.



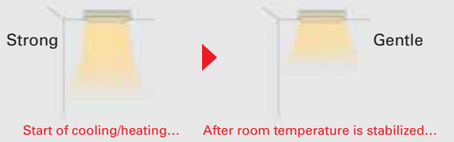
Outside-air Intake

Units are equipped with a knock-out hole that enables the induction of fresh outside-air.



Equipped with Automatic Air-speed Adjustment

In addition to the conventional 4-speed setting, units are now equipped with an automatic air-speed adjustment mode. This setting automatically adjusts the air-speed to conditions that match the room environment. At the start of heating/cooling operation, the airflow is set to high-speed to quickly heat/cool the room. When the room temperature reaches the desired setting, the airflow speed is decreased automatically for stable comfortable heating/cooling operation.



Equipped with High- /Low-ceiling Modes

Units are equipped with high- and low-ceiling operation modes that make it possible to switch the airflow volume to match room height. The ability to choose the optimum airflow volume makes it possible to optimize the breezy sensation felt throughout the room.

Capacity	High ceiling	Standard ceiling	Low ceiling
50	3.5m	2.7m	2.5m
60	3.5m	2.7m	2.5m
71	3.5m	2.7m	2.5m

PCA–HA SERIES

PCA-RP71/125HA

Standard features include a strong carbon-black stainless steel body and built-in oil mist filter to prevent oil from getting into the unit. Perfect for providing a comfortable air conditioning environment in kitchens that use open-flame cooking.

Tough on Oily Smoke

A durable stainless steel casing that is resistant to oil and grease is provided to protect the surface of the body. Grimy dirt and stains are removed easily, enabling the unit to be kept clean at all times.

High-performance Oil Mist Filter

A high-performance heavy-duty oil mist filter is included as standard equipment. The filtering system is more efficient than conventional filters, thereby effectively reducing the oily smoke entering the air conditioner. The filter is disposable, thereby enabling trouble-free cleaning and maintenance.

Oil Mist Filter Cleaning

When used in kitchens, the oil mist filter should be replaced once every two months. The system comes with 12 filters elements. After these have been used, optional elements (PAC-SG38KF-E) can be purchased.

Oil mist filter

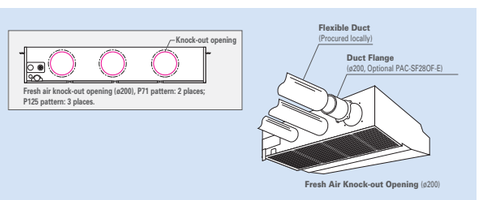
Pull the handle to easily slide the filter out

Easy Maintenance – Even for Cleaning the Fan

A separate fan casing that can be disassembled in sections is adopted to ensure easy fan cleaning. Drain pan cleaning onsite is also no problem owing to the use of a pipe connector that is easily removed.

Fresh Outside-air Intake (Option)

There is a knock-out opening on the rear panel of the unit that can be used to bring fresh air into the unit. This helps to improve ventilation and make the kitchen comfortable.



Notes: 1) A fresh-air duct flange is required (sold separately)
2) All fresh Outdoor-air Intake option is not available.

Cosmetic Front and Hanging Fixture Covers (Option)

Cosmetic covers are available to prevent the collection of dust and grime on the main body and hanging fixture sections.

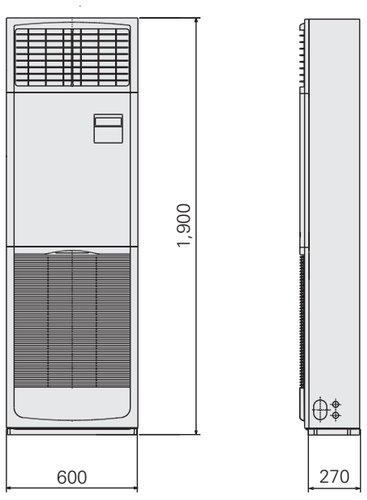
PSA SERIES

Installation of this floor-standing series is easy and quick.
An excellent choice when there is a sudden need for an air conditioner to be installed.

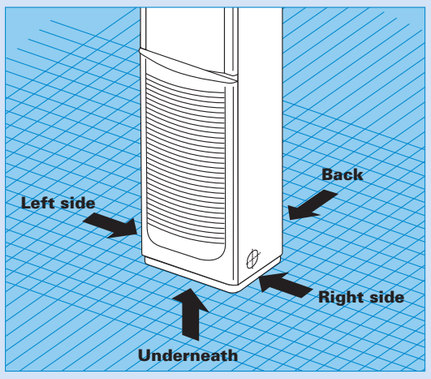
Quick and Easy Installation, Space-saving and Design That Compliments Any Interior

The floor-standing indoor unit is mounted on the floor, enabling quick installation. Its compact body requires only minimal space.

● PSA-RP71GA



4-way pipe work connections enable greater freedom in installation
Remarkable freedom in choosing installation sites is allowed by providing piping connection to the indoor unit in four places: left side, back, from underneath and on the right side of the unit. Even installation in the corner of a room is easy.



Built-in Remote Controller

Easy Operation with Built-in PAR-21MAA Remote Controller
Icon, letter and number visibility are improved with the adoption of a dot-matrix LCD, and operation management functions have been increased. (For details, refer to pages 21-22.)

Main Functions

- Multi-language Display
- Limited Temperature Range Setting
- Auto-off Timer
- Operation Lock
- Weekly Timer

*For details, please refer to pages 21-22.

Low Maintenance

Long-life Filter as Standard Equipment
Indoor units are equipped with a long-life filter that has a maximum service life of 2,500 hours (based on use under average office conditions). Filter cleaning is drastically reduced. Furthermore, the adoption of an "open-and-close grille" makes it easy to take the filter out to clean off dust and particulates.

PEAD SERIES

PEAD-RP35/50/60/71/100/125/140

The thin, ceiling-concealed indoor units of this series are the perfect answer for the air conditioning needs of buildings with minimum ceiling installation space and wide-ranging external static pressure. Energy-saving efficiency has been improved, reducing electricity consumption and contributing to a further reduction in operating cost.

Compact Indoor Units

The height of the models from 35–140 has been unified to 250mm. Compared to the previous PEAD-RP EA model, the height has been reduced by as much as 75mm (models 100–140), making installation in low ceilings with minimal clearance space possible.

PEAD-RP JA (L)

Reduction of **75mm** (models 100–140) compared to PEAD-EA

External Static Pressure

Five-stage external static pressure conversion is possible. Capable of being set to a maximum of 150Pa, units are applicable to a wide range of building types.

■External static pressure setting

Series	35	50	60	71	100	125	140
PEAD-RP EA	30/70Pa			70/130 (with optional motor) Pa			
PEAD-RP GA	–	–	10/50/70Pa			–	–
PEAD-RP JA	**35/50/70/100/150Pa**						

"Rank A" Energy Savings Achieved for All Models

Models in all capacity ranges have achieved the "Rank A" energy savings rating. This contributes to an impressive reduction in the cost of electricity.

■Previous Model: PEAD-RP EA (equipped with power inverter)

Capacity	35		50		60		71		100		125		140	
Energy Rank	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating
	A	B	C	C	A	B	A	B	A	B	A	B	A	B

■New Model: PKA-RP JA (equipped with power inverter)

Capacity	35		50		60		71		100		125		140	
Energy Rank	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating	Cooling	Heating
	A	A	A	A	A	A	A	A	A	A	A	A	A	A

Drain Pump Option Available with All Models

The line-up consists of two types, models with or without a built-in drain pump.

PEAD-RP JA → Drain pump built-in

PEAD-RP JAL → No drain pump

✻Units with an "L" included at the end of the model name are not equipped with a drain pump.

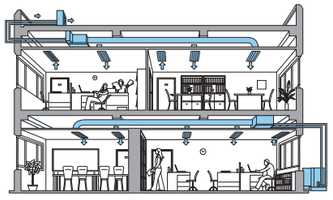
PEA SERIES

PEA-RP200/250/400/500GA

For elegance and style, the PEA Series compliments the room environment with an aesthetically pleasing ceiling installation and a vast line-up of performance functions. Long pipe work installation is supported, increasing freedom in the placement of indoor units.

Flexible Duct Design Enables Use of High-pressure Static Fan

A flexible duct design and 150Pa external static high-pressure are incorporated. The increased variation in airflow options ensures operation that best matches virtually all room layouts.



Long Refrigerant Piping Length

With the addition of more refrigerant, the maximum length for refrigerant piping has been increased to 100 metres. As a result, it is much easier to create the optimum layout for unit installation.

POWERFUL HEATING

SERIES

SELECTION

Line-up consists of two series.
Choose the series that best matches the building layout.

ZUBADAN SERIES

The line-up includes outdoor unit models 75–125 and three types of indoor units.

Outdoor Unit

PUHZ-HRP71/100VHA2
PUHZ-HRP100/125YHA2

Indoor Unit

4-way cassette

PLA Series

Ceiling-concealed

PEAD Series

Wall-mounted

PKA Series

MSZ-FD VABH SERIES

The line-up includes outdoor models 25–50 and two colour variations for the indoor unit.

Outdoor Unit

MUZ-FD25/35VABH

MUZ-FD50VABH

Indoor Unit

Wall-mounted

White

MSZ-FD25/35/50VA

Wall-mounted

Silver

MSZ-FD25/35/50VAS

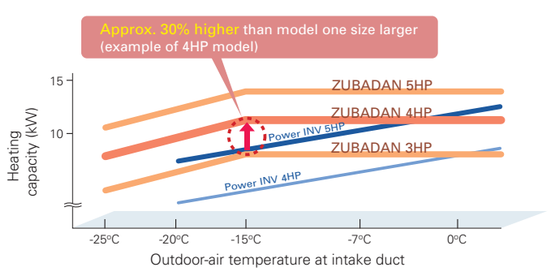
ZUBADAN SERIES

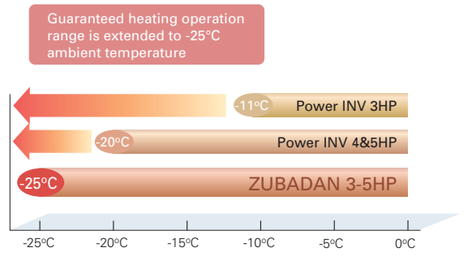
The ZUBADAN Series incorporates an original Flash Injection technology that improves the already high heating capacity of the system. This new member of the series line-up ensures comfortable heat pump-driven heating performance in cold regions.

✻Units in photo are Japanese models.
European model specifications are different.

Improved Heating Performance

Mitsubishi Electric's unique "Flash Injection" circuit achieves remarkably high heating performance. This technology has resulted in an excellent heating capacity rating in outdoor temperatures as low as -15°C, and the guaranteed heating operation range of the heating mode has been extended to -25°C. Accordingly, the heat-pump units of the ZUBADAN Series are perfect for warming homes in the coldest of regions.



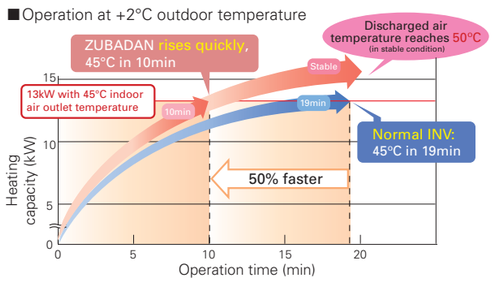


Enhanced Comfort

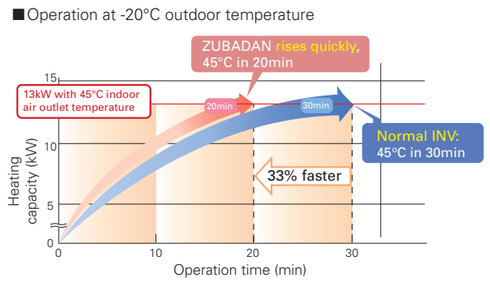
The Flash Injection circuit improves start-up and recover from the defrosting operation. A newly introduced defrost operation control also improves defrost frequency. These features enable the temperature to reach the set temperature more quickly, and contribute to maintaining it at the desired setting.

Quick Start-up

■Operation at +2°C outdoor temperature



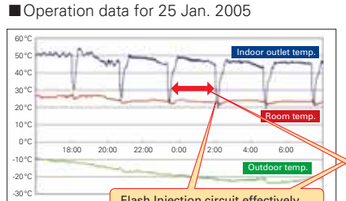
■Operation at -20°C outdoor temperature



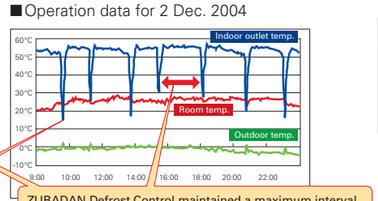
ZUBADAN Defrost Control and Faster Recovery from Defrost Operation

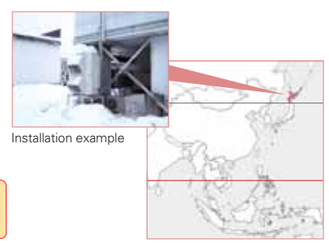
Field Test Results: Office building in Asahikawa, Hokkaido, Japan

■Operation data for 25 Jan. 2005



■Operation data for 2 Dec. 2004

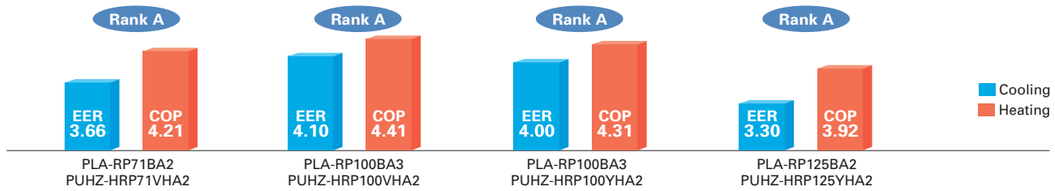




"Rank A" Energy Savings Achieved for Range of Full-capacity Models

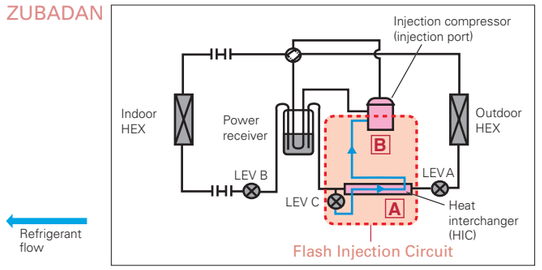
DC Inverter EER A COP A

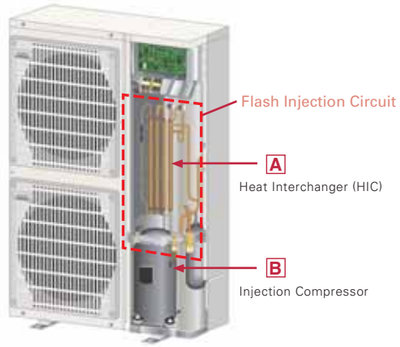
These highly efficient air conditioners have a "Rank A" energy-savings rating, contributing to a significant reduction in electricity costs year-round.



Mitsubishi Electric's Flash Injection Technology
The Key to High Heating Performance at Low Outdoor Temperatures

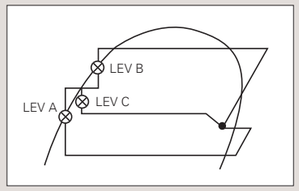
■Flash Injection Circuit





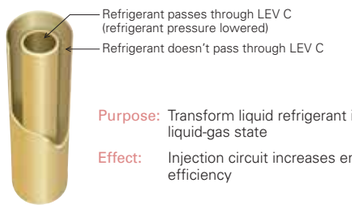
The Mr. Slim model of the ZUBADAN Series is equipped with Mitsubishi Electric's original Flash Injection Circuit, which is comprised of a bypass circuit and heat interchanger (HIC). The HIC transforms rerouted liquid refrigerant into a gas-liquid state to lower compression load. This process ensures excellent heating performance even when the outdoor temperature drops very low.
In traditional units, when the outdoor temperature is low, the volume of refrigerant circulating in the compressor decreases due to the drop in refrigerant pressure and protection from overheating due to high compression, thereby reducing heating capacity. The Flash Injection Circuit injects refrigerant to maintain the refrigerant circulation volume and compressor operation load, thereby maintaining heating capacity.

Mollier Chart Image Representing Flash Injection Circuit Operation



A Heat Interchanger (HIC)

HIC cross-sectional view

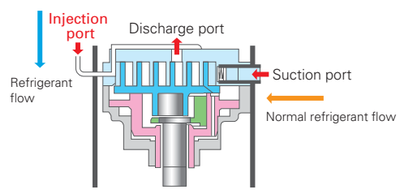


Purpose: Transform liquid refrigerant into liquid-gas state

Effect: Injection circuit increases energy efficiency

The compressor is subjected to a heavy load when compressing liquid refrigerant, and the result is lower operation efficiency. The addition of HIC supports refrigerant heat exchange at two different pressure levels. The heat-exchange process transforms the injected liquid refrigerant into a gas liquid state, thereby decreasing the load on the compressor during the compression process.

B Injection Compressor



Purpose: To increase the volume of refrigerant being circulated

Effect: Improves heating capacity at low outdoor temperatures, and enables higher indoor-air outlet temperature adjustment and higher defrost operation speed

Refrigerant passes from the HIC into the compressor through the injection port. Having two refrigerant inlets makes it possible to raise the volume of refrigerant being circulated when the outdoor temperature is low and at the start of heating operation.

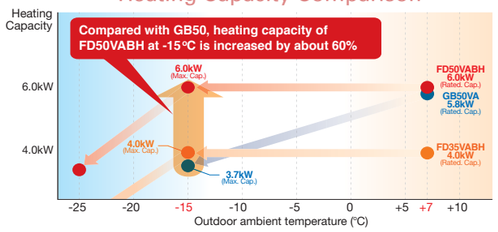
FD VABH SERIES

Unlike conventional air conditioning systems, the FD Series doesn't lose heating capacity when it's cold outside. Original technologies ensure excellent heating performance under extremely low outdoor temperatures and an impressive guaranteed operating range.

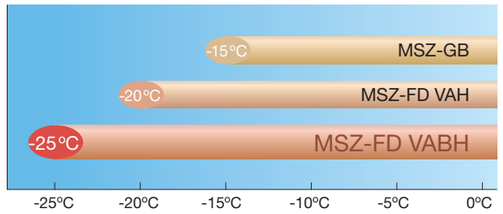
Unparalleled Heating Performance

FD Series outdoor units are equipped with a high-output compressor that provides enhanced heating performance under low outdoor temperatures. The heating operation range is extended down to -25°C.

Heating Capacity Comparison



Operation Range



Compact, Powerful Compressor

A special manufacturing technology, "Heat Caulking Fixing Method," has been introduced to reduce compressor size while maintaining a high compressor output. This technology enables the installation of a powerful compressor in compact MUZ outdoor units. As a result, excellent heating performance is achieved when operating in cold outdoor environments.

Compressor fixed using conventional method (Arc spot-welded method)

Outer layer must be thick enough to hold the cylinder.

Compressor fixed using Heat Caulking Fixing Method

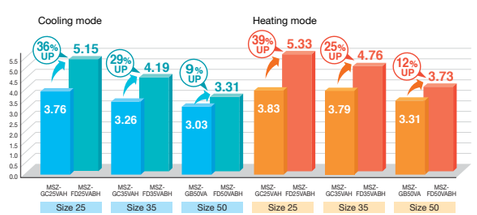
Compressor size reduced while maintaining same cylinder inner diameter.

High Energy Efficiency – "Energy Rank A" for All Models

DC Inverter EER A COP A

Advanced inverter technologies such as the incorporation of an innovative DC inverter equipped with a rare earth magnet motor have increased energy efficiency. An energy efficiency rating much higher than the standard G Series has resulted in all MSZ-FDVABH units attaining and an "Energy Rank A" rating for both cooling and heating operation.

[Energy Efficiency Comparison]

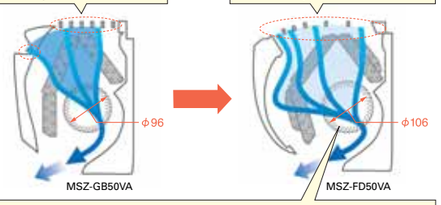


Amazingly Quiet Operation – Redesigned for Performance

A larger fan diameter, wider air inlet in the upper section of the unit and a revised airflow path in the size 50 model reduces noise at low fan speed by 3dB for both cooling and heating modes.

Small air inlet ducts in the indoor unit result in loss of pressure in the airflow path.

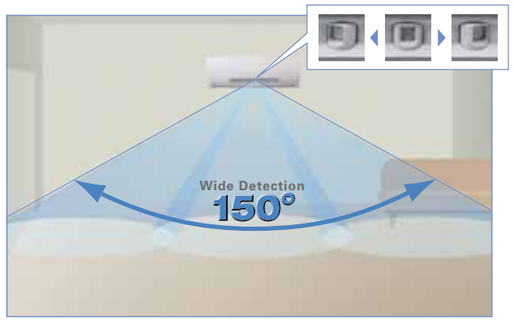
Air inlet ducts have been widened, reducing the pressure loss in the airflow path.



Fan diameter has been increased, enabling the motor to run at a slow speed while increasing the airflow, thereby contributing to quieter operation.

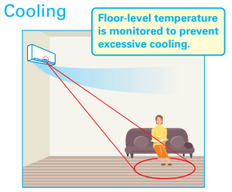
i-see Sensor

Sensor sweeps from side-to-side automatically monitoring the floor temperature over a wide area spanning 150°.



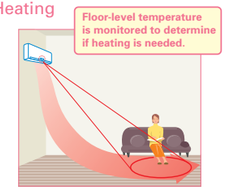
Conventional air conditioners monitor the air temperature at the top of a room to control room temperature and fail to take floor-level temperature, that which has the strongest impact on room comfort, into consideration. The "i-see Sensor" monitors floor-level temperature to ensure that optimum comfort is obtained throughout the room.

Cooling



Cold air migrates to the floor, and this can result in excessive cooling. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent over-chilling.

Heating



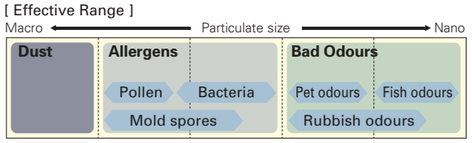
Warm air migrates to the ceiling, thereby failing to warm the floor-level zone. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent insufficient warming.

Plasma Duo Filter Systems

FD Series air conditioners are equipped with state-of-the-art air cleaning technologies including a pre-filter and two plasma-based filtering mechanisms (Plasma Duo) that virtually deodorise and purify the air.

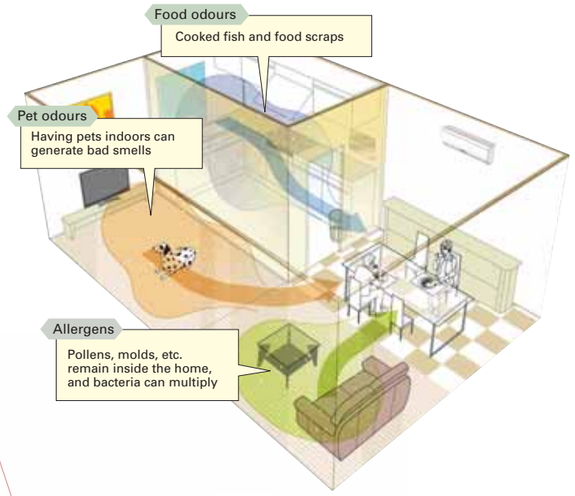
Highly insulated, airtight residences tend to trap odours, allergens like pollen and mold, and bacteria generated in daily life inside the home.

[Effective Range]



Standard filters capture dust in the air, but they cannot catch smaller particulates.

The FD Series has a plasma-based system with dual functions—air purification and deodorisation—that work to capture small particulates that standard filters cannot, and keep indoor-air clean.



Plasma electrode located here

Plasma Electrode

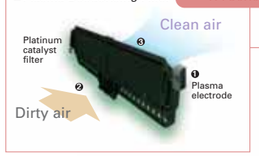
A plasma electrode is mounted inside the indoor unit. An electro-discharge process generates ozone and plasma, which then work together with the two special filters to produce dynamic plasma air-purifying performance.

Plasma Deodorisation

A nanometre scale-meshed platinum catalyst deodorising filter catches odourous particulates that are in the air. Once trapped, the particulates are decomposed and odours eliminated by ozone generated from a plasma electrode.

Deodorising time reduced approx. 50% (compared to FA Series)

■ Plasma Deodorising Filter



❶ Plasma electrode produces ozone
❷ Odour-causing particulates trapped
❸ Odour-causing particulates decomposed by ozone

❶ Plasma electrode produces plasma
❷ Plasma gives particulates a negative charge
❸ Positive side of the electret filter attracts the negatively charged particulates and enzymes neutralise them

Plasma Air Purification

An electrified anti-allergen enzyme filter is incorporated. A combination of static electricity charged into the filter and plasma generated by the plasma electrode is used to catch bacteria, pollen and other allergens in the air, which are then neutralised by the enzyme in the filter.

■ Plasma Purifying Filter

MXZ SERIES

SELECTION

Choose from four types of indoor units and eight outdoor units that can run up to eight indoor units each.
Create the system that best matches room shapes and number of rooms.

STEP 1 SELECT INDOOR UNITS

Select the indoor unit to be installed in each room.

Wall-mounted

Floor-standing

Cassette

Ceiling-concealed

STEP 2 SELECT OUTDOOR UNITS

Select the best outdoor unit based on the number of indoor units and overall system capacity required.

2-port Connect up to 2 indoor units

MXZ-2A30VA
MXZ-2A40VA
MXZ-2A52VA

3-port Connect up to 3 indoor units

MXZ-3A54VA

4-port Connect up to 4 indoor units

MXZ-4A71VA MXZ-4A80VA

5-port Connect up to 5 indoor units

MXZ-5A100VA

8-port Connect up to 8 indoor units

Outdoor Unit

MXZ-8A140VA

Branch Box

PAC-AK30BC

PAC-AK50BC

Connection to indoor units requires an appropriate branch box (distribution piping is required when connecting two branch boxes).

STEP 3 CHECK SYSTEM COMPATIBILITY

Possible combinations depends on the outdoor unit chosen. Please check the following points.

Check Indoor Units

Refer to the "Indoor Unit Compatibility Table" to check if the indoor units selected can be used with the outdoor unit selected. (Indoor units not listed in the table cannot be used.)

Check Indoor Unit Capacity Combination

Refer to the "Combination Table" to check if the capacity combination of the indoor unit selected is connectable. (Combinations not listed cannot be connected.)

If the combination you want to use cannot be found, please change either the indoor unit or outdoor unit so that the combination matches one of those shown in the tables.

MXZ SERIES

Advancements in the MXZ Series include efficiency and flexibility in system expansion capabilities. The best solution when requiring multi-system air conditioning needs.

2-port

MXZ-2A30VA
MXZ-2A40VA
MXZ-2A52VA

3-port 4-port

MXZ-3A54VA
MXZ-4A71VA

4-port 5-port

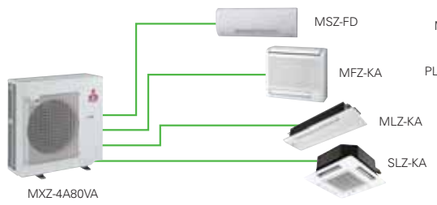
MXZ-4A80VA
MXZ-5A100VA

8-port

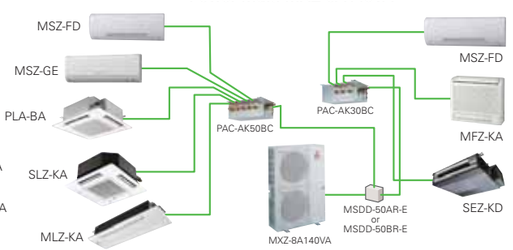
MXZ-8A140VA

EXAMPLE SYSTEM

Smaller MXZ 2, 3, 4 and 5 ports
(example of MXZ-4A80VA system)



Power Multi MXZ-8A140VA



Handle Up to 8 Rooms with a Single Outdoor Unit

The MXZ Series offers an 8-system line-up to choose from, ranging between 3.0 and 14.0kW. All of them are compatible with specific M, S and P series indoor units. A single outdoor unit can handle a wide range of building layouts.

"Energy Rank A" for All Models

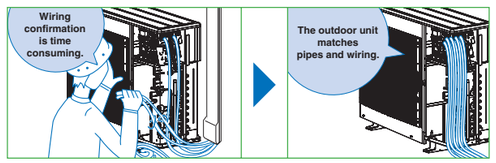
The incorporation of Mitsubishi's cutting-edge inverter technologies has achieved an "Energy Rank A" rating for all MXZ units.

Support Functions

Wiring/Piping Correction Function* (4A80/5A100)

Simply press a single button to confirm if piping and wiring are properly connected. Wiring errors are corrected automatically when discovered. This eliminates the need to confirm complicated wiring connections when expanding the system. (For details, refer to the outdoor unit installation manual.)

* Function cannot be used when the outdoor temperature is below 0°C.
The correction process requires 10–15 minutes to complete and must be conducted with the unit set to the "Cooling" mode.



Ampere Limit Adjustment (4A80/5A100/8A140)

Dipswitch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs. (For details, refer to the outdoor unit installation manual.)

* Maximum capacity is lowered with the use of this function.

Operation Lock (2A/3A/4A/5A/8A)

To accommodate specific use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service. (For details, refer to the outdoor unit installation manual.)

Total Input			kW	0.003	0.003
Operating Current			A	0.05	0.05
Drain Hose Size*5			mm	O.D. 20 (VP - 16)	
Dimensions [HxWxD]			mm	198 - 450 - 280	
Weight			kg	9.3	8.1
Piping [diameter]	Branch [Indoor side]	Liquid	mm	6.35 x 5	6.35 x 3
		Gas	mm	9.52 x 4, 12.7 x 1	9.52 x 3
	Main [Outdoor side]	Liquid	mm	9.52	9.52
		Gas	mm	15.88	15.88
	Connection Method			Flared	Flared
Wiring	to Indoor Unit			3-wire + Earth wire	
	to Outdoor Unit			3-wire + Earth wire	

*1) Power Input and Operating Current (MAX) figures are for outdoor unit only.
*2) EER and COP are the figures when connected with belon indoor units.
MXZ-2A30VA → MSZ-GE25VA x 2
MXZ-2A40VA → MSZ-GE25VA + MSZ-GE35VA
MXZ-2A52VA → MSZ-GE35VA x 2
MXZ-3A54VA → MSZ-GE22VA x 3
MXZ-4A71VA → MSZ-GE22VA x 4
MXZ-4A80VA → MSZ-GE35VA x 4
MXZ-5A100VA → MSZ-GE22VA x 5
MXZ-8A140VA → MSZ-GA60VA x 3 + PAC-AK30BC
*3) If the outdoor unit is installed higher then the indoor unit ,max. height is reduced to 10m.
*4) If the outdoor unit is installed higher then the indoor unit ,max. height is increased to 30m.
*5) Drain hose is to be locally purchased.

Indoor Unit Compatibility Table

Possible combinations of outdoor units and indoor units are shown below.

Conditions for specifications

Temperature conditions are based on JIS B8616

Cooling	Indoor	27˚C DB, 19˚C WB
	Outdoor	35˚C DB
Heating	Indoor	20˚C DB
	Outdoor	7˚C DB, 6˚C WB

Refrigerant piping length ; 5M

Total input are indicated based on the following voltages.

	Indoor unit	Outdoor unit
50Hz	Single ph. 230V	Single ph. 230V / Three ph. 400V

How to read a model name

1) M & S SERIES

M	M : M SERIES S : S SERIES
S	"S"= Wall-mounted , "F"= Compact Floor-standing , "E"= Compact Ceiling-concealed , "L"= 4-or 1-way cassette , "U"= Outdoor unit
Z	"Z"= Inverter Heat Pump , "H"= Fixed-Speed Heat Pump , "none"= Cooling Only
–	
F	Series
D	Generation
25	Rated cooling capacity (kW base)
V	230V / Single Phase / 50Hz
A	"A"= R410A with new A control , "B"= R410A with conventional control
H	"H"= Anti-freeze Heater Equipped Model , "S"= Silver Indoor Unit

2) P SERIES

P	P SERIES
U	"K"= Wall-mounted , "S"= Floor-standing , "L"= 4-way cassette , "E"= Ceiling-concealed , "C"= Ceiling Suspended , "U"= Outdoor unit
H	"H"=For heating and cooling , "blank"= Cooling Only
Z	"Z"=Inverter , "blank"= Fixed-Speed
–	
H	"H"= Powerful Heating ZUBADAN , "blank" = Other series
RP	"RP"= R410A & Cleaning Free Pipe Reuse, "P"=R410A
71	Rated cooling capacity (kW base)
V	"V"= 230V / Single Phase / 50Hz , "Y"=400V / Three Phase / 50Hz
H	Generation
A	"A"= A control

3) MXZ SERIES

M	M series
X	Multi System Outdoor unit (Heat Pump)
Z	Inverter Heat Pump
–	
4	Maximum number of connectable indoor units
A	Generation
71	Rated cooling capacity (kW base)
V	230V / Single Phase / 50Hz
A	"A"= R410A with new A control

Major Optional Parts

Part Name	Description
Platinum Catalyst Deodourising Filter Captures small foul-smelling substances in the air, then breakdown the source of the odours with the power of the ozone generated in the plasma electrode unit and platinum catalyst contained in the filter.	Anti-allergy Electric Enzyme Filter This electrified filter catches dead mites and their droppings, pollen and other allergens on the filter filament, then decomposes them with artificial enzymes.	Air-cleaning Filter Removes fine dust particles from the air by means of static electricity.	Anti-allergen Enzyme Filter Captures the bacteria, pollen and other allergens in the air and neutralise them with the enzyme in the filter.	Catechin Air Filter Contains catechin, which has antiviral and antibacterial characteristics.	Oil Mist Filter Element Filter element (12 pieces) that blocks the oil mist for ceiling-suspended models used in professional kitchens.	High-efficiency Filter Element Element for high-efficiency filter. Removes fine dust particles from the air.	i-see Sensor Corner Panel Corner panel holding the i-see Sensor.	Shuttle Plate Plate for blocking an air outlet of the 4-way cassette indoor unit.	Multi-functional Casement Casement for fresh-air intake and attaching the high-efficiency filter element (optional).	Fresh-air Intake Duct Flange Flange attachment for adding a duct to take in fresh air from outside.	Space Panel Decorative cover for the installation when the ceiling height is low.	
Part Name	Description
Quick-clean Kit Cleaning tool to remove dust on the filter, fan and heat exchanger. This tool can be easily connected to a household vacuum cleaner for quick, convenient cleaning of the units.	Drain Pump Pumps drain water to a point higher than that where the unit is installation.	Decorative Cover To be attached to the upper section of ceiling-suspended models for professional kitchen use. Helps prevent dust accumulation.	MA& Contact Terminal Interface Interface for connecting with the PAR-21MAA remote controller or MAC-821SC-E Centralised On/Off remote controller, and to relay operation signals.	M-NET Interface Interface to connect with M-NET controllers.	Centralised On/Off Controller Remote controller capable of regulating up to eight indoor units. On/Off selection and operation status confirmation are possible.	Power Supply Terminal Kit Terminal bed to change the power supply from outdoor power supply to separate indoor/outdoor power supplies.	Wired Remote Controller Advanced remote controller with a large-size dot liquid-crystal display, multi-language display and convenient functions like Weekly Timer.	Wired Remote Controller Kit for PKA(H) Advanced remote controller with a large-size dot liquid-crystal display, multi-language display and convenient functions like Weekly Timer for wall-mounted units.	Wireless Remote Controller Signal Sender Handheld unit for sending operation signals to the indoor unit.	Wireless Remote Controller Signal Receiver Receives operation signals from the wireless remote controller handheld unit.	Wireless Remote Controller Kit (Sender & Receiver) Remote controller handheld unit (signal sender) and receiver (signal receiver) for ceiling-suspended units.	
Part Name	Description
Control Holder Holder for storing the remote controller.	Remote Sensor Sensor to detect the room temperature at remote positions.	Remote On/Off Adapter Connector for receiving signals from the local system to control the on/off function.	Remote Operation Adapter Adapter to display the operation status and control on/off function from a distance.	Connector Cable for Remote Display Connector used to display the operation status and control on/off function from a distance.	Distribution Pipe Branch pipe for P Series simultaneous multi-system use, or to connect two branch boxes for MXZ-8A140VA systems.	Joint Pipe Part for connecting refrigerant pipes of different diametres.	Liquid Refrigerant Dryer Removes water and minute particles from refrigerant pipes.	Branch Box Outer Cover Casement for branch boxes.	Air Discharge Guide Changes the direction of air being exhausted from the outdoor unit.	Air Protection Guide Protects the outdoor unit from the wind.	Drain Socket A set of caps to cover unnecessary holes at the bottom of the outdoor unit, and a socket to guide drain water to the local drain pipe.	
Part Name	Description
Centralised Drain Pan Catches drain water generated by the outdoor unit.	M-NET Converter Used to connect P Series A-control models to M-NET controllers.	Control/Service Tool Monitoring tool to display operation and self-diagnosis data.	Step Interface Interface for adjusting the capacity of inverter-equipped outdoor units. (For further details, refer to pg. 160.)

Explanation of Terminology

Maximum piping length:
This is the maximum allowable length of the refrigerant piping. The amount of refrigerant pipe used cannot be longer than the length specified.

Total length:
The maximum allowable combined length of all the refrigerant piping between the outdoor unit and indoor unit(s).

Outdoor Unit - Indoor Unit:
The maximum allowable length of the refrigerant piping between the outdoor unit and indoor units installed when multiple units are connected to a single outdoor unit. This distance limitation refers to the maximum length between the outdoor unit and the farthest indoor unit.

Pipe length difference from distribution pipe:
The maximum allowable difference in refrigerant piping length from the distribution pipe to the farthest indoor unit and from the distribution pipe to the closest indoor unit when multiple indoor units are connected to a single outdoor unit using a distribution pipe.

Indoor Unit - Distribution Pipe:
The maximum allowable length of the refrigerant piping between indoor units and the distribution pipe when multiple indoor units are connected to a single outdoor unit.

Outdoor unit - Branch box:
The maximum allowable length of the refrigerant piping between the branch box and outdoor unit when a branch box is used to connect multiple indoor units to a single outdoor unit.

Branch box - Indoor unit:
The maximum allowable length of the refrigerant piping between the branch box and the indoor unit farthest from it when a branch box is used to connect multiple indoor units to a single outdoor unit.

Outdoor unit - Branch box - Indoor unit:
The maximum allowable length of the refrigerant piping from the outdoor unit to the farthest indoor unit when a branch box is used to connect multiple indoor units with a single outdoor unit.

Total pipe length after the branch box:
The maximum allowable length of the refrigerant piping between the branch box and all indoor units combined when a branch box is used to connect multiple indoor units with a single outdoor unit.

Maximum height difference:
This is the maximum allowable height difference. It is necessary to install the air conditioning system so that the height distance is no more than the difference specified. (Specified differences may vary if the outdoor unit is installed higher or lower than the indoor units).

Outdoor unit - Indoor unit:
The maximum allowable difference in height between the outdoor unit and indoor units when installed (when multiple indoor units are connected to a single outdoor unit, this distance limitation refers to the maximum height difference between the outdoor unit and an indoor unit).

Indoor unit - Indoor unit:
The maximum allowable difference between the heights of indoor units when multiple indoor units are connected to a single outdoor unit.

Branch box - Indoor unit:
The maximum allowable difference between the heights of the branch box and an indoor unit when multiple indoor units are connected to a single outdoor unit.

Branch box - Branch box:
The maximum allowable difference between the heights of the branch boxes when two branch boxes are used to connect multiple indoor units to a single outdoor unit.

Maximum number of bends:
This is the maximum allowable number of bends in the refrigerant piping. The total number of bends in the refrigerant piping used cannot exceed the number specified.

Total number:
The maximum allowable number of bends for all refrigerant piping between the outdoor unit and indoor units.

Outdoor unit - Indoor unit:
The maximum allowable number of bends between the outdoor unit and each indoor unit when multiple indoor units are connected to a single outdoor unit.

AIR-TO-WATER

SERIES LINE-UP

Mitsubishi Electric have a good variety of units depending on conditions for installation sites.

PACKAGED TYPE

Water heat exchanger is built in the outdoor units.

AIR-TO-WATER

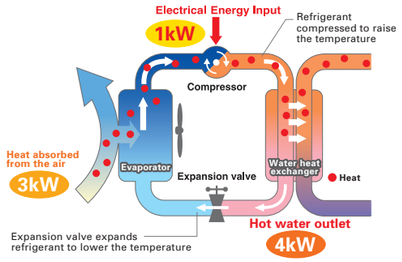
This series of extremely efficient air-to-water heat pumps incorporates numerous original air conditioning technologies developed by Mitsubishi Electric. The eco-friendly units offer the perfect combination of powerful heating and cooling performance and economical running cost.

The Secret Behind Our Stellar Heat Pump Efficiency is Capturing the Heat that is Already in the Air.

Heat pump systems are now capturing attention as a decisive catalyst in efforts to conserve energy. With this technology, atmospheric heat is harnessed; that is, it is collected from the air and used as a heat source to provide highly efficient heating. For example, a heat pump with a coefficient of performance (COP) of 4.0 uses 1kW of electrical energy input and 3kW of heat energy transferred from outside-air to the heat pump for an impressive final heat output of 4kW.

Air-to-Water Heat Pump Principle (when heating)

Refrigerant and Heat Circulation
< Case of COP 4.0 >



Produces 4 times the amount of energy input

"1kW"
Electrical Energy Input

+

"3kW"
Heat Absorbed from the Air

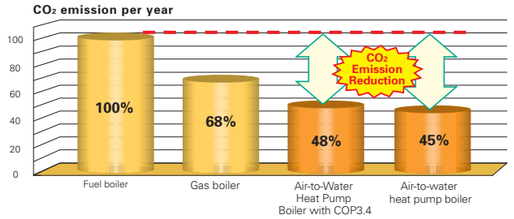
=

"4kW"
Heat Output

Drastic Reductions in Operation Cost and CO_2 Emissions – No Sacrifice in Comfort

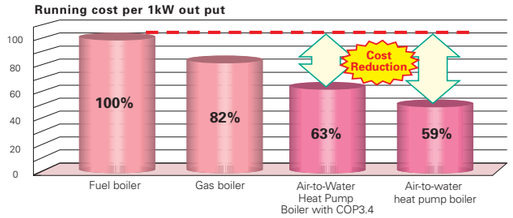
Heat pumps differ from conventional heat sources in their ability to effectively use atmospheric heat. A unit with a COP of 4.0 has a heat output of 4kW for each kilowatt of electricity consumed. This contributes to a major reduction in operating cost when compared to other heating sources on the market.

CO_2 emission per year



Source: A coefficient of CO_2 emission based on Ministry of the Environment Japan data.

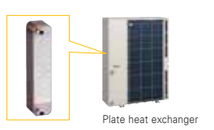
Running cost per 1kW out put

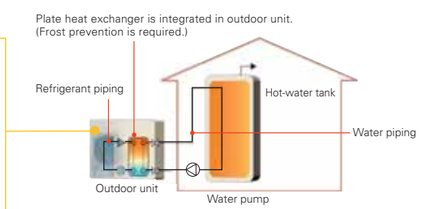


Source: Energy prices based on EUROSTAT data.

No Need for Refrigerant Piping

Packaged type model ensures easy installation, with no refrigerant piping work required.





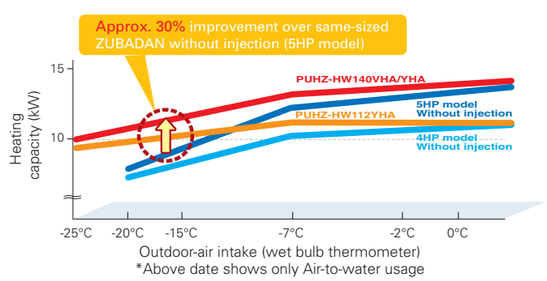
Interface (Option)

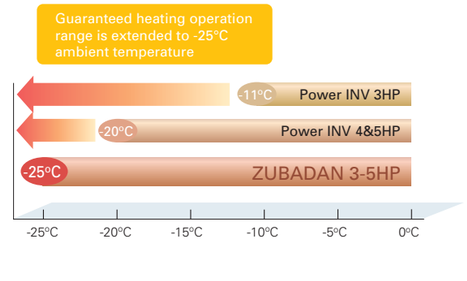
Two types of interface are available.
Select the one that best fits your needs.

Improved Heating Performance

ZUBADAN

Mitsubishi Electric's unique "Flash Injection Circuit" is a key component in the high heating performance of the ZUBADAN. This technology enables the rated heating capacity to exceed that of the power inverter series by 30%, even when operating with sub-zero temperatures outdoors, and the guaranteed operating range of the heating mode is extended to -25°C. Thanks to ZUBADAN technologies, Air-to-water heat pumps can now be used to heat homes in cold regions too.

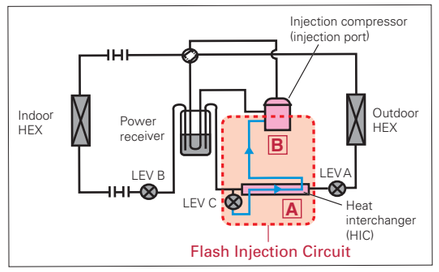


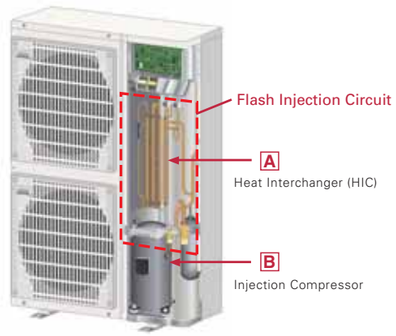


Mitsubishi Electric's Flash Injection Technology The Key to High Heating Performance at Low Outdoor Temperatures

Flash Injection Circuit

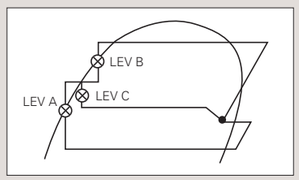
ZUBADAN





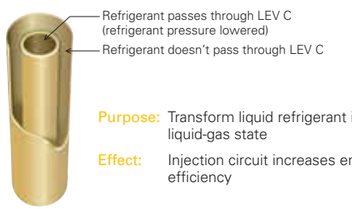
The Mr. Slim model of the ZUBADAN Series is equipped with Mitsubishi Electric's original Flash Injection Circuit, which is comprised of a bypass circuit and heat interchanger (HIC). The HIC transforms rerouted liquid refrigerant into a gas-liquid state to lower compression load. This process ensures excellent heating performance even when the outdoor temperature drops very low.
In traditional units, when the outdoor temperature is low, the volume of refrigerant circulating in the compressor decreases due to the drop in refrigerant pressure and protection from overheating due to high compression, thereby reducing heating capacity. The Flash Injection Circuit injects refrigerant to maintain the refrigerant circulation volume and compressor operation load, thereby maintaining heating capacity.

Mollier Chart Image Representing Flash Injection Circuit Operation



A Heat Interchanger (HIC)

HIC cross-sectional view

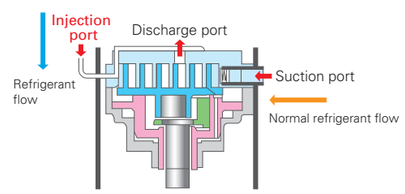


Purpose: Transform liquid refrigerant into liquid-gas state

Effect: Injection circuit increases energy efficiency

The compressor is subjected to a heavy load when compressing liquid refrigerant, and the result is lower operation efficiency. The addition of HIC supports refrigerant heat exchange at two different pressure levels. The heat-exchange process transforms the injected liquid refrigerant into a gas liquid state, thereby decreasing the load on the compressor during the compression process.

B Injection Compressor



Purpose: To increase the volume of refrigerant being circulated

Effect: Improves heating capacity at low outdoor temperatures, and enables higher water outlet temperature adjustment and higher defrost operation speed

Refrigerant passes from the HIC into the compressor through the injection port. Having two refrigerant inlets makes it possible to raise the volume of refrigerant being circulated when the outdoor temperature is low and at the start of heating operation.

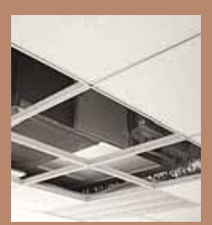
LOSSNAY SYSTEM



SELECTION

A line-up of three product groups that addresses a wide range of needs.

SELECT LOSSNAY

Select the most appropriate model according to factors such as the shape of the building and ventilation requirements.

LGH SERIES
Ceiling-concealed
Nine models (150–2000m³/h)

LGH-15 to 100RX5-E

LGH-150 and 200RX5-E

- Applications: Offices, Stores, Etc.
- High total heat-exchange efficiency
- Excellent airflow control (Extra High, High, Low and Extra Low)
- Multi-ventilation Mode
- Can be interconnected with other Mitsubishi Electric air conditioners
- Exclusive Lossnay remote-control system
- Mr. Slim remote controller can be used for some systems

LGH SERIES
Ceiling-suspended 400m³/h

- Applications: Stores, Schools, Etc.
- High/Low airflow control
- Can be controlled using separately sold mechanical switches

VL SERIES
Wall-mounted 100m³/h

- Application: Prefabricated offices (container houses), Residences, Etc.
- High/Low airflow control
- Pull-string switch

SELECT OPTIONS

Remote controller (PZ-60DR-E)

LOSSNAY SYSTEM

Lossnay ventilation systems are renowned industry-wide for their efficiency. They offer environment-friendly energy recovery and humidity control, and enable air conditioning systems to simultaneously provide optimum room comfort and energy savings.

One Adult Needs 400 Litres (Equivalent to Two Barrels) of Fresh Air Every Hour

In everyday life daily, occasionally there are times you might feel out of breath, like when you're in a closed room or a crowded train. This is because the air becomes carbon-rich; that is, the carbon dioxide (CO_2) that people exhale accumulates in closed spaces, thereby increasing the carbon gas density in the enclosed space. The average person exhales about 20 litres of carbon-rich gas per hour. If there is no ventilation, the carbon gas density increases in the room as the oxygen density decreases, and various problems could eventually occur. To live comfortably, every person needs a surprising 400 litres of fresh air per hour; a volume equivalent to two large barrels.

Main Gaseous Contaminants Found Indoors

Contaminant Name	Chemical Formula	Harm
Carbon Monoxide	CO	Causes severe damage to the body
Sulfurous Gases (sulfur oxide)	SO_2	Damages the body; causes asthma; reacts with metals, generates rusting
Nitrous Gases Nitric oxide Nitrogen dioxide	 NO NO_2	Direct harm to the body is unclear; becomes NO_2 when bound with oxygen, causes indirect harm; irritates the throat and lungs, possibly causing serious damage.
Carbon Dioxide Gas	CO_2	No direct harm unless the gas is very dense
Bad Odours	—	Bad odours found inside residences do not cause serious damage health-wise, but may create discomfort

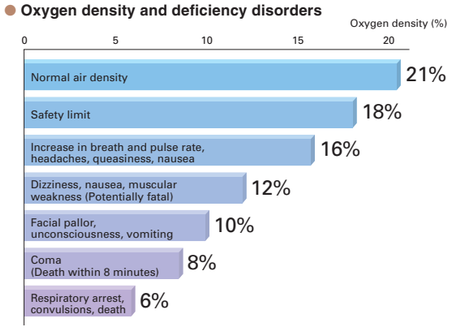
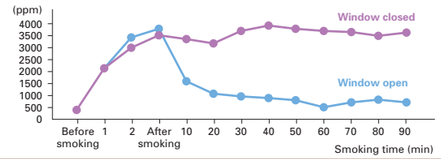
Oxygen density and deficiency disorders

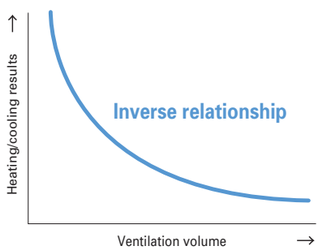


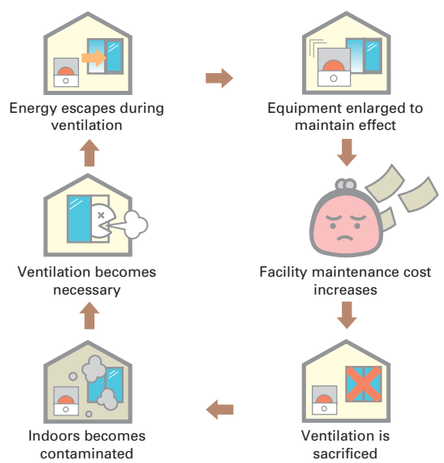
Ventilation and Change in Amount of CO_2 Exhaled



Ventilation Providing Both Heating and Cooling

When using a ventilating system, indoor air that has been heated or cooled escapes causing the room to become cold in winter or hot in summer. As the heated/cooled air dissipates, the environment becomes uncomfortable, precious energy and money are wasted, and the increasing amount of contaminated indoor air that needs to be ventilated turns into a major problem. The reason for this phenomenon is that heating/cooling and ventilation have an incompatible relationship that is inversely proportional. For air conditioning from now on, Mitsubishi Electric proposes heating and cooling systems that provide effective ventilation at the same time.

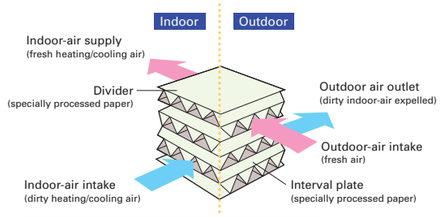




Simple Construction, High Performance – That's Lossnay Air Ventilation

Simple Construction

As shown in the illustration, the Lossnay element design adopts a cross-flow shape and plate-fin construction that enables total heat exchange using specially processed paper dividers and interval plates. Since the dividers separate the intake and exhaust passages, fresh air is always inducted without mixing with exhaust air.



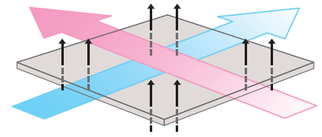
Operating Principle

The Lossnay element skillfully provides total heat exchange—temperature (i.e., sensible heat) and humidity (latent heat)—using specially processed paper dividers and moisture permeability characteristics; enabling dirty indoor-air to be expelled outside and fresh outdoor-air to be inducted inside, passing through the Lossnay without ever mixing.
The principle can be explained by a simple experiment. Roll a sheet of paper into a tube shape and blow through it. The warmth of the air is transferred to your hand, and conversely, if cold air is blown through the tube, the coldness would be transferred to your hand. The same special properties of the paper are used for the Lossnay total heat exchanger.

What are Sensible Heat and Latent Heat?

Sensible heat is the heat resulting from temperature changes (i.e., rise/fall) in a substance, and latent heat is that which is generated or dissipates according to changes in the state of a substance (e.g., evaporation, condensation, etc.).

- Temperature (sensible heat) exchange Thermal conduction and heat transfer through the divider in all temperature ranges.
- Humidity (latent heat) exchange Water vapor transference through the divider in all temperatures ranges based on differences in water vapor pressure.

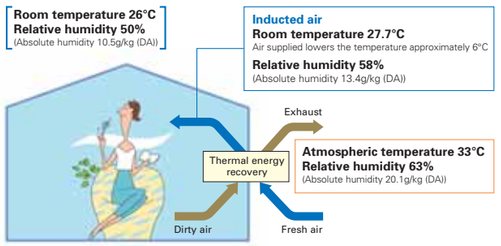


Comfortable Air Ventilation Regardless of Being Hot or Cold

Summer

Difference between inducted air and indoor temperature is 1.7°C.

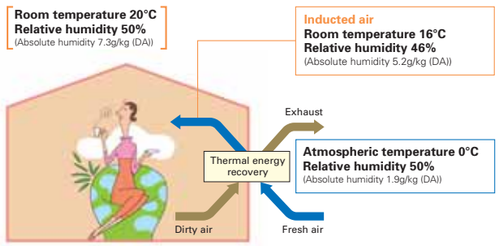
- Inducted air is brought to the condition of cooled (dehumidified) indoor-air.



Winter

Humidity recovery of 4kg/h

- Inducted air is brought to the condition of the heated (humidified) indoor-air.



■Calculation Conditions: LGH-100RXs (High notch)

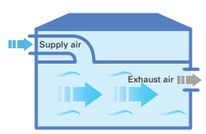
In the case of general ventilation (including open windows) → In order to induct outdoor-air as is, changes in high-temperature summer air and low-temperature winter air are not considered.

Other Features

Lossnay provides better air ventilation because air is inducted and expelled concurrently, thereby offering more efficient operation than traditional air ventilation (exhaust ventilation only).

If air is not supplied, the air pressure in the room drops and the entire space is not properly ventilated.

If Lossnay is used



By inducting and expelling air concurrently, Lossnay constantly provides sufficient ventilation and maintains a good air environment indoors.

Mr. Slim & Lossnay Interconnected Ventilation Systems

High-quality Air Conditioning Systems Fusing Comfort and Economy

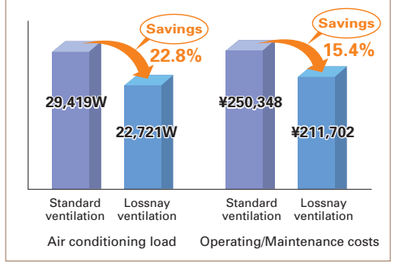
Six Major Merits of Interconnected Ventilation Systems

Problems					
• Indoor-air is contaminated by cigarette smoke, dust, etc. • Air induction is insufficient, resulting in insufficient ventilation.	• Heating/Cooling airflow doesn't reach foot level	• Conditioned air expelled outside with exhaust air • High initial operating cost	• Separate switches for air conditioner and ventilation systems makes operation troublesome • Detailed zone-by-zone operation not possible	• Air conditioner and ventilation fan operation noise annoying • Outside traffic noise annoying	• Maintenance such as changing the filter is difficult
↓	↓	↓	↓	↓	↓
Merits					
Efficient, fresh-air ventilation	Comfortable airflow	Energy-saving ventilation	Control with a single remote controller	Quiet operation	1-year no-maintenance filter

Reduce Heating/Cooling Costs with Efficient Ventilation

Conventional ventilation systems expel heated/cooled air outside, which is definitely a minus from an economic standpoint. Lossnay units induct outdoor-air through an independent heat exchanger and bring the air near the indoor-air temperature before distributing it in the room, thereby keeping the indoor-air temperature virtually constant. Incorporation of a Lossnay unit can result in a reduction in annual heating/cooling cost of approximately 15–16%.

Annual savings: 22.8% reduction in air conditioning load; 15.4% reduction in electricity cost



Trial calculation conditions, standard business office in Tokyo metropolitan area; 100m²

Air Conditioning Equipment
<Standard Ventilation> Air Conditioner: PLHX-JI80GFK 4-way Cassette Ventilator (simultaneous induction/exhaust): BFS-20ASK Straight Sirocco Fan x 2 units
<Lossnay Ventilation> Air Conditioner: PLHX-JI40GKF 4-way Ceiling Cassette Ventilator (simultaneous induction/exhaust): Lossnay LGH-50CMP

Calculation Factors
- Standard office size: 100m²
- Cooling load:104W•m²
- Heating load: 77.9W•m²
- Ventilation volume: 500m³/h
- Operating time: 10hr/day, 26days/mo, 4mo/yr (cooling time); 5mo/yr (heating time), Capacity ratio 0.7
- Electricity rate (Tokyo Electric Power Company, 6kV commercial power): Summertime ¥17.84/kWH, otherwise ¥16.22/kWH

One Remote Controller for All Operations

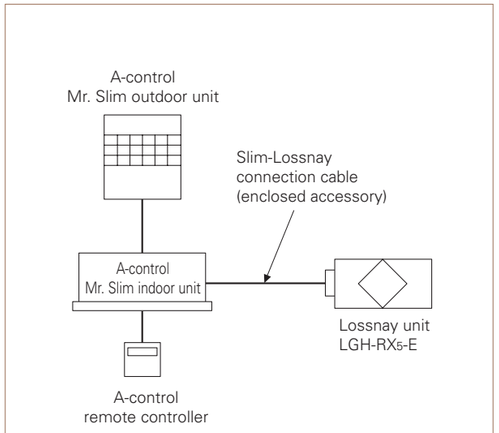
Control both Mr. Slim and Lossnay units with a single controller, the new "MA Remote Controller." Compared to conventional air conditioning and ventilation systems that require a separate remote controller for each unit, operation is greatly simplified. A variety of features are incorporated, such as a "Ventilation Changeover Switch" and "Filter Sign" for independent operation of the Lossnay when running for long periods of time.

Mr. Slim Air Conditioners Compatible with Lossnay Ventilation Units

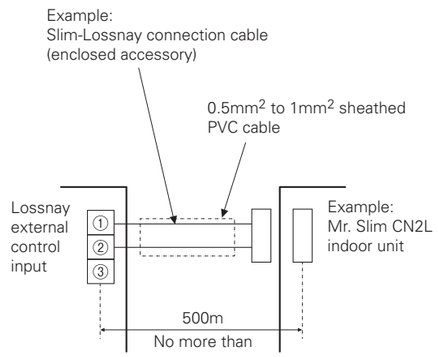
Type	Model Name	Type	Model Name
Ceiling Cassette (4-way)	PLA-BA/SLZ-KA	Ceiling	PCA-KA/HA
Ceiling-concealed	PEAD-JA/PEA-GA	Wall-mounted	PKA-HA/KA
	SEZ-KD	Floor-standing	PSA-GA

* The wired remote controller must be set before it can be used to operate individual Lossnay units.

System Example



Connection Method



Lossnay Function Table (Interlocked settings)

Item	Details
Number of indoor units that can be set to interlocked operation with 1 Lossnay unit in each group	1 unit
Number of Lossnay units that can be set to interlocked operation with 1 indoor unit	1 unit
Operation of Lossnay unit only (When indoor unit is stopped)	Possible
Independent Lossnay unit start and stop (When indoor unit is operating)	Not possible
Delayed operation (Optional setting)	30 minute delayed operation when indoor unit cooling/heating is started
Fan speed switching	High/Low*
Ventilation mode	Automatic
Filter indicator	None
Error indicator	None
Restrictions and precautions	The Lossnay remote controller cannot be used for systems interlocked with Mr. Slim.

* Cannot select extra-low fan speed when using the MA Remote Controller.

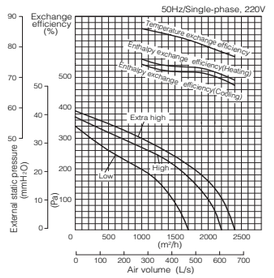
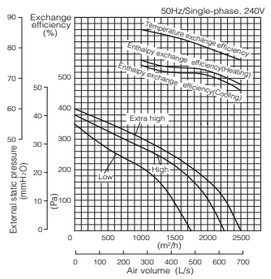
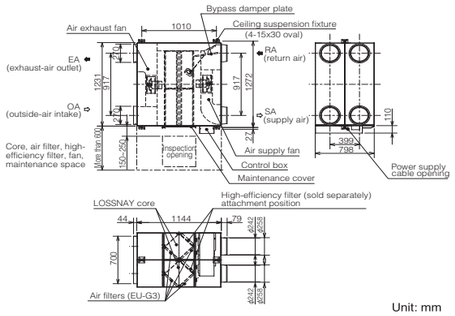
Power Consumption (W)		1035-1100	910-980	715-785	1040-1110	915-980	720-785
Air Volume	(m^3/h)	2000	2000	1580	2000	2000	1580
	(L/s)	556	556	439	556	556	439
External Static Pressure	(mmH_2O)	16.3-16.8	10.2-10.7	6.1-6.6	16.3-16.8	10.2-10.7	6.1-6.6
	(Pa)	160-165	100-105	60-65	160-165	100-105	60-65
Temperature Exchange Efficiency (%)		80.0	80.0	83.0	—	—	—
Enthalpy exchange efficiency (%)	Heating	72.5	72.5	73.5	—	—	—
	Cooling	71.0	71.0	72.0	—	—	—
SPL (dB) (measured at 1.5m under the center of apanel in an anechoic chamber)		39.5-40	37-38	32.5-34	40.5-41	38-39	33.5-35
Weight (kg)		118					
Starting Current		Under 11.9A					

*The air outlet noise (45° angle,1.5 meters in front of the unit) is about 10dB higher than the indicated value at high fan speed.





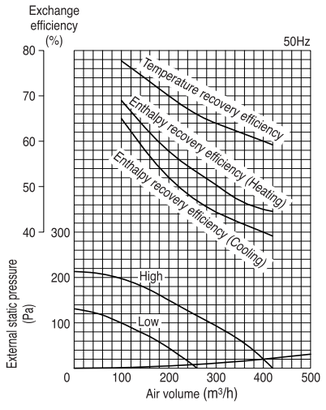


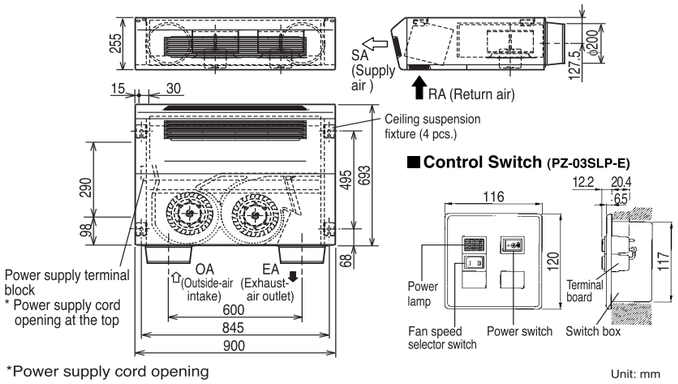
Unit: mm

LGH-40ES-E

Supply Voltage (V)	Power Supply Frequency (Hz)	Fan Speed	Power Consumption (W)	Air Volume (m^3/h)	Air Volume (L/s)	Temperature Recovery Efficiency (%)	Enthalpy Recovery Efficiency (%) Heating	Enthalpy Recovery Efficiency (%) Cooling	Noise (dB(A))	Weight (kg)
1-phase 220~240	50	Hi	132-146	400	111	60	45	40	41-43	25
		Lo	82-95	250	69	66	54	48	32-34	

*The value of noise was measured at an anechoic chamber. it may vary depending on the room structure, building materials or the way the main was installed.





Unit: mm

VL-100U-E

Supply Voltage (V)	Power Supply Frequency (Hz)	Fan Supply	Air Volume (m^3/h)	Power Consumption (W)	Temp.Exchange Efficiency (%)	Noise (dB)	Weight (kg)
